Inflation in Emerging and Developing Economies Jongrim Ha,M. Ayhan Kose,Franziska Ohnsorge,2019-01-03 This is the first comprehensive study in the context of EMDEs that covers in one consistent framework the evolution and global and domestic drivers of inflation the role of expectations exchange rate pass through and policy implications In addition the report analyzes inflation and monetary policy related challenges in LICs The report documents three major findings In First EMDE disinflation over the past four decades was to a significant degree a result of favorable external developments pointing to the risk of rising EMDE inflation if global inflation were to increase In particular the decline in EMDE inflation has been supported by broad based global disinflation amid rapid international trade and financial integration and the disruption caused by the global financial crisis While domestic factors continue to be the main drivers of short term movements in EMDE inflation the role of global factors has risen by one half between the 1970s and the 2000s On average global shocks especially oil price swings and global demand shocks have accounted for more than one quarter of domestic inflation variation and more in countries with stronger global linkages and greater reliance on commodity imports In LICs global food and energy price shocks accounted for another 12 percent of core inflation variation half more than in advanced economies and one fifth more than in non LIC EMDEs Second inflation expectations continue to be less well anchored in EMDEs than in advanced economies although a move to inflation targeting and better fiscal frameworks has helped strengthen monetary policy credibility Lower monetary policy credibility and exchange rate flexibility have also been associated with higher pass

through of exchange rate shocks into domestic inflation in the event of global shocks which have accounted for half of EMDE exchange rate variation Third in part because of poorly anchored inflation expectations the transmission of global commodity price shocks to domestic LIC inflation combined with unintended consequences of other government policies can have material implications for poverty the global food price spikes in 2010 11 tipped roughly 8 million people into poverty

Aggregate Money Demand Functions Dennis L. Hoffman, Robert H. Rasche, 2012-12-06 The econometric consequences of nonstationary data have wide ranging implications for empirical research in economics Specifically these issues have implications for the study of empirical relations such as a money demand function that links macroeconomic aggregates real money balances real income and a nominal interest rate Traditional monetary theory predicts that these nonstationary series form a cointegrating relation and accordingly that the dynamics of a vector process comprised of these variables generates distinct patterns Recent econometric developments designed to cope with nonstationarities have changed the course of empirical research in the area but many fundamental challenges for example the issue of identification remain This book represents the efforts undertaken by the authors in recent years in an effort to determine the consequences that nonstationarity has for the study of aggregate money demand relations We have brought together an empirical methodology that we find useful in conducting empirical research Some of the work was undertaken during the authors sabbatical periods and we wish to acknowledge the generous support of Arizona State University and Michigan State University respectively Professor Hoffman wishes to acknowledge the support of the Fulbright Hays Foundation that supported sabbatical research in Europe and separate support of the Council of 100 Summer Research Program at Arizona State University **Whitaker's Books in Print** ,1998 **CEPAL Review** ,2013 **National Union Catalog** ,1973 Includes entries for maps and atlases
