Mobile Communications A. Jagoda, M. de Villepin, 2013-11-11 1 1 COMMUNICATION WHILE TRAVELLING The pace of our daily life has been increasing for several decades Our needs have multiplied as new products have appeared and then been replaced after a few years or even months of existence by a more fashionable product or one of higher performance The life cycles of the technologies used in consumer and professional electronic products are also becoming shorter This acceleration is an inherent fact of our consumer society and the relationship between people and machines are Lifestyles due to the multiplicity of ephemeral consumer products Objects changing no longer have a history they are merely tools which fulfil a predetermined function Personal portable products are of a new type which has appeared among pens wallets these impersonal objects This category includes watches handbags calculators portable radios and pocket telephones As these products for the pocket are carried on one s person they belong in a very personal way and have therefore a specific identity corresponding to the image which they are given In the evolution of lifestyles the explosive increase of travel and time management are major factors The pocket telephone is therefore remark able for two reasons It is not only an impersonal tool or product but is also very much a personal portable product The possibility of distant communication while travelling

being able to call or be called at will anywhere at any time permits the pocket telephone to be often considered as a desirable almost magic personal item

Fist,2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the
