

Activity Guide - Function Machine

Important Notes:

Challenge 1: Time for students to start building their function!

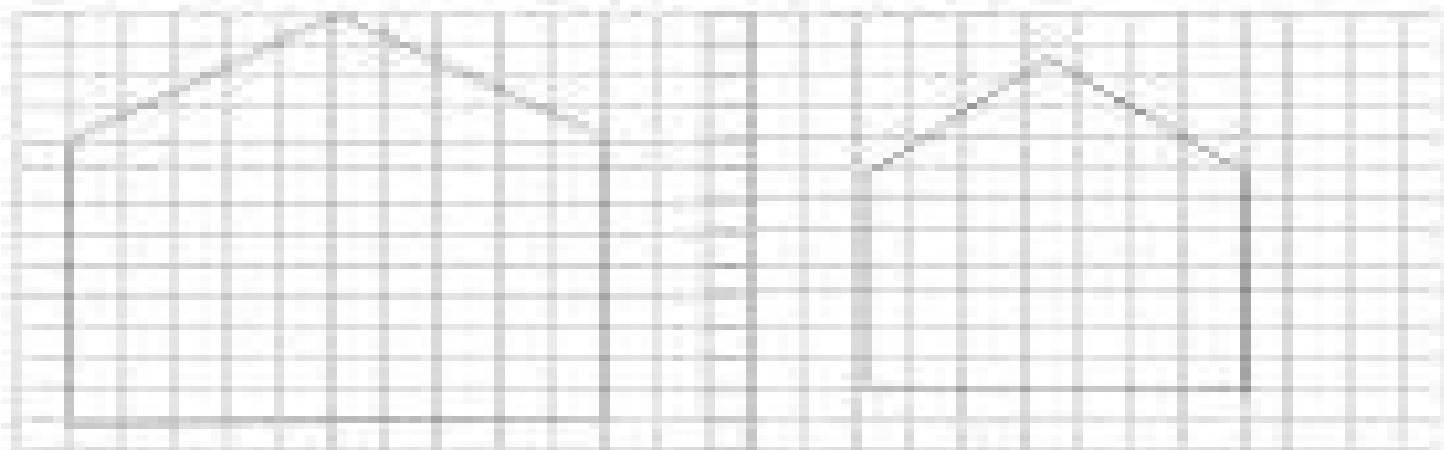

- Students function generators for parameters (with type parameters for their choice). They select the parameters. They could just function for simple (and different) sets of values of function's domain (parameters) or intervals. When the parameter is substituted the function makes a series of values. (2 pts)

Name:	Parameter 1 name:	Parameter 2 name:
Function:	input:	output:
Enter 5 values for each of 4 sets. Each value is first input and then output value. Parameter is 10 (input) and 5 (output). Each value is first input and then output value.		

- Using your output values, what does your function call the function? (different parameters) (2 pts)

Example: $f(x) = 2x + 1$. If $x = 1$, then $f(1) = 2(1) + 1 = 3$. If $x = 2$, then $f(2) = 2(2) + 1 = 5$.

- Draw what your function should look like using the values below for each of the function's sets of values. (2 pts)
