

Student Council Secretary Speech

I really enjoy participating in student council and that's why I decided to run for secretary. As most of you know my name is **Carrie Cassareello** and let me tell you why you should vote for me.

I am dedicated to student council. I have attended all the meetings this year. I also contribute time and effort to student council. In my free time at school (in between periods or during my lunch), I made power points for the class cup events, updating my class on what was going on and I kept them involved. The secretary has to keep a record of the minutes during meetings, which means they have to write or take notes on what we discussed in the meeting. I am very organized and I would make sure not to lose any papers or any work I did.

I also consider myself a team player. I play on many sports teams and contribute in many ways. I really enjoy working with other people, it's good to give and receive ideas. Together we can come up with great ideas to help the school and community. Student council is a great way to be involved, it is a great way to get to know and work with new people.

I have been a representative for 2 years, so I have experience and am ready for any challenge, I am ready to work. I am ready to help our community. I would really enjoy being our student council secretary.

I believe I would be the perfect candidate because I am dedicated, I am organized, I am trustworthy and because I am a hard worker.

And don't forget

"Take note, the right vote is Carrie Cassareello for Secretary"

Thank you!

Introduction to Transfer Learning Jindong Wang, Yiqiang Chen, 2023-03-30 Transfer learning is one of the most important technologies in the era of artificial intelligence and deep learning It seeks to leverage existing knowledge by transferring it to another new domain Over the years a number of relevant topics have attracted the interest of the research and application community transfer learning pre training and fine tuning domain adaptation domain generalization and meta learning This book offers a comprehensive tutorial on an overview of transfer learning introducing new researchers in this area to both classic and more recent algorithms Most importantly it takes a student's perspective to introduce all the concepts theories algorithms and applications allowing readers to quickly and easily enter this area Accompanying the book detailed code implementations are provided to better illustrate the core ideas of several important algorithms presenting good examples for practice

Phonology and Second Language Acquisition Jette G. Hansen Edwards, Mary L. Zampini, 2008 This volume is a collection of 13 chapters each devoted to a particular issue that is crucial to our understanding of the way learners acquire learn and use an L2 sound system In addition it spans both theory and application in L2 phonology The book is divided into three parts with each section unified by broad thematic content Part I Theoretical Issues and Frameworks in L2 Phonology lays the groundwork for examining L2 phonological acquisition Part II Second Language Speech Perception and Production examines these two

aspects of L2 speech in more detail Finally Part III Technology Training and Curriculum bridges the gap between theory and practice Each chapter examines theoretical frameworks major research findings both classic and recent methodological issues and choices for conducting research in a particular area of L2 phonology and major implications of the research findings for more general models of language acquisition and or pedagogy

Deep Learning Techniques Applied to Affective Computing Zhen Cui,Wenming Zheng,2023-06-14 Affective computing refers to computing that relates to arises from or influences emotions The goal of affective computing is to bridge the gap between humans and machines and ultimately endow machines with emotional intelligence for improving natural human machine interaction In the context of human robot interaction HRI it is hoped that robots can be endowed with human like capabilities of observation interpretation and emotional expression The research on affective computing has recently achieved extensive progress with many fields contributing including neuroscience psychology education medicine behavior sociology and computer science Current research in affective computing concentrates on estimating human emotions through different forms of signals such as speech face text EEG fMRI and many others In neuroscience the neural mechanisms of emotion are explored by combining neuroscience with the psychological study of personality emotion and mood In psychology and philosophy emotion typically includes a subjective conscious experience characterized primarily by psychophysiological expressions biological reactions and mental states The multi disciplinary features of understanding emotion result in the fact that inferring the emotion of humans is definitely difficult As a result a multi disciplinary approach is required to facilitate the development of affective computing One of the challenging problems in affective computing is the affective gap i e the inconsistency between the extracted feature representations and subjective emotions To bridge the affective gap various hand crafted features have been widely employed to characterize subjective emotions However these hand crafted features are usually low level and they may hence not be discriminative enough to depict subjective emotions To address this issue the recently emerged deep learning also called deep neural networks techniques provide a possible solution Due to the used multi layer network structure deep learning techniques are capable of learning high level contributing features from a large dataset and have exhibited excellent performance in multiple application domains such as computer vision signal processing natural language processing human computer interaction and so on The goal of this Research Topic is to gather novel contributions on deep learning techniques applied to affective computing across the diverse fields of psychology machine learning neuroscience education behavior sociology and computer science to converge with those active in other research areas such as speech emotion recognition facial expression recognition Electroencephalogram EEG based emotion estimation human physiological signal heart rate estimation affective human robot interaction multimodal affective computing etc We welcome researchers to contribute their original papers as well as review articles to provide works regarding the neural approach from computation to affective computing systems This Research Topic aims to bring together research including but not limited to

Deep learning architectures and algorithms for affective computing tasks such as emotion recognition from speech face text EEG fMRI and many others Explainability of deep Learning algorithms for affective computing Multi task learning techniques for emotion personality and depression detection etc Novel datasets for affective computing Applications of affective computing in robots such as emotion aware human robot interaction and social robots etc [Acquiring Pragmatics](#) Sandrine Zufferey,2014-11-27 [Acquiring Pragmatics](#) offers a comprehensive synthesis of state of the art research on the acquisition of pragmatics It introduces the current topics of research in theoretical pragmatics and explores the issues they raise for language acquisition research and the new experimental designs which have been developed to address them While each chapter covers each topic in depth it also places a strong emphasis on the underlying methodological aspects of each issue which will help the reader to develop their own experimental designs Key topics covered include The interfaces between pragmatics and language acquisition The social aspects of pragmatic competence The cognitive aspects of pragmatic competence The acquisition of pragmatics in autistic spectrum disorders and second language acquisition [Acquiring Pragmatics](#) is key reading for advanced undergraduate and graduate students studying pragmatics and language acquisition

S. R. Mahadeva Prasanna, Alexey Karpov, K. Samudravijaya, Shyam S. Agrawal, 2022-11-12 This book constitutes the proceedings of the 24th International Conference on Speech and Computer SPECOM 2022 held as a hybrid event in Gurugram India in November 2022 The 51 full and 9 short papers presented in this volume were carefully reviewed and selected from 99 submissions The papers present current research in the area of computer speech processing including audio signal processing automatic speech recognition speaker recognition computational paralinguistics speech synthesis sign language and multimodal processing and speech and language resources **Waveform Analysis of Sound** Mikio Tohyama, 2015-01-10 What is this sound What does that sound indicate These are two questions frequently heard in daily conversation Sound results from the vibrations of elastic media and in daily life provides informative signals of events happening in the surrounding environment In interpreting auditory sensations the human ear seems particularly good at extracting the signal signatures from sound waves Although exploring auditory processing schemes may be beyond our capabilities source signature analysis is a very attractive area in which signal processing schemes can be developed using mathematical expressions This book is inspired by such processing schemes and is oriented to signature analysis of waveforms Most of the examples in the book are taken from data of sound and vibrations however the methods and theories are mostly formulated using mathematical expressions rather than by acoustical interpretation This book might therefore be attractive and informative for scientists engineers researchers and graduate students who are interested in the mathematical representation of signals and the applications of Fourier analysis The book can be described as being practically self contained but does assume readers are familiar with introductory topics in discrete signal processing as in the discrete Fourier transform Hence this book might be also usable as a textbook in graduate courses in applied mathematics on topics such as complex functions Almost all scientific phenomena are sensed as waves propagating in some space Over the years waveform analysis has therefore been one of the resilient academic areas of study and still is seen as fertile ground for development In particular waveform analysis based on the theory of linear systems would be a good example where a physical interpretation can be given to the mathematical theory of complex functions in terms of magnitude angle poles and zeros of complex functions For readers who are interested in the physical aspects of sound and vibration data or elementary formulation of wave equations and their solutions the book Sound and Signals by M Tohyama Springer 2011 is recommended It can serve as a complementary companion to this present volume or independently as a good reference **Information**
