Translation Jody Byrne, 2006-06-23 Based largely on my doctoral dissertation *Textual Cognetics and the Role of Iconic Linkage in Software User Guides* this book is intended to serve as an introduction to technical translation and usability for translators and translation researchers In this book we will look at how it is possible to improve the quality of technical translations by drawing on cognitive psychology usability engineering and technical communication to develop skills which can be implemented during the text production stage of the translation process to ensure more usable texts This book draws on a broad range of research and makes it accessible and applicable to an audience with a background primarily in translation although those with backgrounds in technical writing will also find the discussions of usability cognitive psychology and usability testing useful Technical translation has traditionally been regarded as the poor cousin of real translation Often regarded as a vocational practical and at times rather basic type of translation it has been largely neglected in the literature on translation theory The work that has been done in this area has largely been restricted to terminological issues or technical issues e.g. tools such as translation memories and machine translation etc or does not fully reflect the reality of modern translation and needs to be updated e.g. Pinchuk 1977 Sykes 1971 However technical translation is a much more promising avenue of theoretical investigation than many suspect **CILS** Christina Schäffner, 2000 Recent developments particularly globalisation and advances in technology have affected our production and perception of language as reflected in two conflicting forces globalism and tribalism The role of English as an international lingua franca is discussed and conclusions are drawn for the varying activities of translation today and for the rapidly changing job profile of the translator

Machine translation for everyone: Empowering users in the age of artificial intelligence Dorothy Kenny , 2022-07-06 Language learning and translation have always been complementary pillars of multilingualism in the European Union Both have been affected by the increasing availability of machine translation MT language learners now make use of free online MT to help them both understand and produce texts in a second language but there are fears that uninformed use of the technology could undermine effective language learning At the same time MT is promoted as a technology that will change the face of professional translation but the technical opacity of contemporary approaches and the legal and ethical issues they raise can make the participation of human translators in contemporary MT workflows particularly complicated Against this background this book attempts to promote teaching and learning about MT among a broad range of readers

including language learners language teachers trainee translators translation teachers and professional translators It presents a rationale for learning about MT and provides both a basic introduction to contemporary machine learning based MT and a more advanced discussion of neural MT It explores the ethical issues that increased use of MT raises and provides advice on its application in language learning It also shows how users can make the most of MT through pre editing post editing and customization of the technology

Researching Subtitling Processes Anke Radinger,2025-07-31

Subtitling is almost as old as the motion picture itself It is a very specific form of translation that goes well beyond the transferring of written texts given that the source text the film is a complex combination of spoken and written text together with dynamic images music and sounds But how does one read a film in order to translate it In this volume Anke Radinger investigates what happens in a subtitlers mind especially in various working environments An example of one of these conditions is the introduction of innovative assistive language tools such as AI powered speech to text into traditional subtitling workflows Using methods like eye tracking and keylogging Radinger reviews computer or rather AI assisted subtitling processes practices and workflows while concentrating on aspects such as effort and quality Her work is a valuable contribution to subtitling process research SPR a young and greatly under researched subfield of audiovisual translation
