Metamathematics and the Philosophical Tradition William Boos, 2018-12-17
Metamathematics and the Philosophical Tradition is the first work to explore in such historical depth the relationship between fundamental philosophical quandaries regarding self reference and meta mathematical notions of consistency and incompleteness Using the insights of twentieth century logicians from Gödel through Hilbert and their successors this volume revisits the writings of Aristotle the ancient skeptics Anselm and enlightenment and seventeenth and eighteenth century philosophers Leibniz Berkeley Hume Pascal Descartes and Kant to identify ways in which these both encode and evade problems of a priori definition and self reference The final chapters critique and extend more recent insights of late 20th century logicians and quantum physicists and offer new applications of the completeness theorem as a means of exploring metatheoretical ascent and the limitations of scientific certainty Broadly syncretic in range Metamathematics and the Philosophical Tradition addresses central and recurring problems within epistemology The volume's elegant condensed writing style renders accessible its wealth of citations and allusions from varied traditions and in several languages Its arguments will be of special interest to historians and philosophers of science and mathematics particularly scholars of classical skepticism the Enlightenment Kant ethics and mathematical logic
