

Note: Calibration is mandatory for gauge to work properly. Tank must be empty when calibration is performed.

Using a small plastic screwdriver, turn the adjustment screw located in a hole on the side of the gauge housing. **NOTE:** Do not use a metal screwdriver... static discharge can damage the gauge.

Move the pointer until it comes to rest directly on "0" or "E" (whichever designates empty on your gauge).

When you have moved the pointer to "0" or "E" with the tank empty, calibration is complete and your gauge is ready to use.
