

TRANSACTIONAL ANALYSIS

Transactional Analysis (TA) is a psychoanalytic theory and method of therapy. Transactions refer to exchanges in human communication. A personality is made up of three ego states:

PARENT

A taught concept that is copied from parent figures. The voice of authority, learning, and attitudes from when we were young. Subdivision to: 1. The critical/ controlling parent. 2. The nurturing parent.

ADULT

Learned concept responding to here and now with no subdivisions. An ability to think and determine action, based on received data. When Parent and Child are kept under control.

CHILD

A felt concept with behavior replayed from childhood. Our internal, emotional reactions and feelings to external events. Subdivision to: 1. The adapted child. 2. The free child ego.

COMPLEMENTARY

The lines between are parallel, so the ego state of the sender impacts the desired receiver's ego state, thus the response complements the sender.

CROSSED

The lines are crossed. Interactees ego states don't match, creating a conflict. Responding via the adult state motivates the sender to come back to the adult state.

ULTERIOR

The sender gives a message sounding like it is from the adult to the adult, with an underlying, subtle message given from the sender's child or parent, to be received by the child or parent.
