Transit Capacity And Quality Of Service Manual 2nd Edition:

Transit Capacity and Quality of Service Manual Transit Cooperative Research Program, 2003 Accompanying CD ROM contains full text of the manual Microsoft Excel spreadsheets and a library of related documents **From Mobility to Accessibility** Jonathan Levine, Joe Grengs, Louis A. Merlin, 2019-11-15 Levine Grengs and Merlin marshal a compelling case to shift to accessibility oriented planning providing much needed conceptual clarity as to what accessibility is and is not But their book also represents a major step toward transforming accessibility from a vaguely defined aspiration into concrete measures that can guide planning decisions Journal of the American Planning Association In From Mobility to Accessibility an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance Jonathan Levine Joe Grengs and Louis A Merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people s ability to reach destinations rather than on their ability to travel fast Existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation But it is the ability to reach destinations not movement per se that people seek from their transportation systems While the concept of accessibility has been around for the better part of a century From Mobility to Accessibility shows that the accessibility shift is compelled by the fundamental purpose of transportation The book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the nature of accessibility and its potential for guiding development of the built environment By redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas **Pedestrian and Evacuation Dynamics 2012** Ulrich Weidmann, Uwe Kirsch, Michael Schreckenberg, 2014-04-23 The 6th International Conference on Pedestrian and Evacuation Dynamics PED2012 showcased research on human locomotion This book presents the proceedings of PED2012 Humans have walked for eons our drive to settle the globe began with a walk out of Africa However much remains to discover As the world moves toward sustainability while racing to assess and accommodate climate change research must provide insight on the physical requirements of walking the dynamics of pedestrians on the move and more We must understand predict and simulate pedestrian behaviour to avoid dangerous situations to plan for emergencies and not least to make walking more attractive and enjoyable PED2012 offered 70 presentations and keynote talks as well as 70 poster presentations covering new and improved mathematical models describing new insights on pedestrian behaviour in normal and emergency cases and presenting research based on sensors and advanced observation methods These papers offer a starting point for innovative new research building a strong foundation for the next conference and for future research **Advances in Manufacturing Technology XXXI** Simeon Keates, 2017-08-15 The urgent need to keep pace with the accelerating globalization of manufacturing in the 21st century has

produced rapid advances in manufacturing research development and innovation This book presents the proceedings of the 15th International Conference on Manufacturing Research ICMR 2017 which also incorporated the 32nd National Conference on Manufacturing Research NCMR and was held at the University of Greenwich London UK in September 2017 The conference brings together a broad community of researchers who share the common goal of developing and managing the technologies and operations key to sustaining the success of manufacturing businesses The book is divided into 13 parts covering topics such as advanced manufacturing technologies including additive ultra precision and nano manufacturing manufacturing systems digital and cyber physical systems product design and development including lifecycle management and supply chain collaboration information and communication including innovation and knowledge management and manufacturing management including lean sustainable and cost engineering With its comprehensive overview of current developments this book will be of interest to all those involved in manufacturing today
