Introduction to Antennas and RF Propagation Analysis Dean James Friesen, 2021-12-31 This practical text gives engineers and technicians at all levels an easy to follow entry point into the subject of RF EM wave propagation and antennas. While aimed primarily at those who are entering the field or transitioning from a related field, the book also helps experienced professionals obtain a more refined understanding of the various methodologies and processes in this area. The book covers the essentials, practices, technical details, and considerations needed to help a team of engineers design, install, and/or predict the technical performance of a new or even existing one-way, two-antenna, long-radiating distance RF communication system. The chapters are organized logically to walk you step by step through the application processes, showing you proven methods to bring about top performance while also helping you factor in unanticipated variances, including those caused by the earth itself, earth's gaseous atmosphere, rain, snow, hail, ice, ionospheric signal attenuation, and EM waves. This kind of understanding and consideration saves time, money, and much frustration in a project. With this book in hand, you will better understand RF EM wave propagation and the technical vernacular used to describe it, become familiar with the various processes and considerations in analyzing, designing, and predicting the performance of new and existing antenna RF communications systems, and more confidently approach problem solving and possible solutions for reducing signal interference and loss. The chapter contents, while not sparing the reader exposure to radiated RF system design and analysis terminology, are written in a relaxed conversational tone and easy to understand manner, making this a perfect learning tool for those entering or transitioning to this field, as well as an excellent supplement or foundational text for an instructional course. The book's logically organized and easy to access chapter structure also facilitates its use as a bench reference for quick lookup or review.

Antenna Design for CubeSats Reyhan Baktur, 2021-12-31 A CubeSat is a miniaturized modular satellite that can be constructed from off-the-shelf components. With advancements in digital signal processing, power electronics, and packaging technology, it is feasible to fit science instruments and communication devices that were traditionally carried on larger satellites on CubeSat constellations. This not only reduces mission cost, repair risk, but also provides more precise and real-time science data. Their low cost and versatility allow for CubeSats to be used to test technologies that are planned to use on larger satellites, to collect point-to-point data in space when launched as CubeSat constellations, or to monitor health of larger spacecrafts. This comprehensive reference explores CubeSat standards, launching methods, and detailed design guidelines for antennas specially made for CubeSat applications. Deployed CubeSat antennas, such as low gain antennas, high gain wire-based antennas, and horn and dish antennas, as they relate to the technology, are explored. Conformal CubeSat Antennas, including those that are independent of CubeSats and those integrated in CubeSat solar panels, are discussed. An antenna design guideline is provided to demonstrate the basics of a CubeSat link budget, which is transitionally published in signal and system community. Written by an expert in the field, this book enables readers to read

antenna specifics when choosing communication front end

Aseptic Processing and

Packaging of Particulate Foods E.M. Willhoft, 2012-12-06 Publications in food technology proliferate; however, noticeable by its absence of coverage is the subject of processing and packaging of particulates in foods. Recent years have seen significant advances which will almost certainly result in substitution of existing and conventional retorting. In addition, when combined with high temperature short time (HTST) processing, we can expect substantial further growth reflecting quality and convenience advantages over products processed from yesterday's technologies. The anticipated growth in particulates is driven by both materials and packaging advances and only requires modest marketing of the organoleptic advantages to establish their place on menu options. The directions taken in packaging developments, especially those interfacing with the latest and established methods of processing, are increasingly influenced by the need to design packaging on a cradle to grave basis. Time was when multi-laminated films on board satisfied the total needs of consumers of aseptic products. The problems of recycling combustible i.e. energy generating materials laminated with aluminium foil are becoming sensitive issues in a world preoccupied with recycling and are creating openings for alternative and environmentally friendly material combinations. This book brings together advanced technologies in the field to provide information for professionals with interests in aseptic processing on how to go about selecting a system appropriate to their commercial needs and constraints.

Travelling Through Education Ole Skovsmose, 2005-01-01 This is a personal notebook from a conceptual travel. But in a different sense, it also represents a report on travelling. The main part of the manuscript was written in Brazil, Denmark and England, whilst notes have also been inspired by visits to other countries. So the book not only represents conceptual travel, it also reflects seasons of real travelling. In Part 1, the book comments on the critical position of mathematics education and also indicates some concerns of critical mathematics education. Part 2 comments on mathematics in action and considers the discussion of mathematics as an applied discipline in the contexts of technology, management, engineering, economics, etc. In Part 3, the book comments on mathematics and science in general. These comments are then generalised into a discussion of reason and of the apparatus of reason. Finally, Part 4 returns to the discussion of mathematics education and comments on notions that could become sensitive to the critical position of mathematics education. Ole Skovsmose is also travelling between different academic fields. He touches upon mathematics and mathematics education, the philosophy of mathematics, technology and science, as well as sociological issues, glancing over issues such as globalisation, ghettoising learning society and risk society. Travelling with the author, the reader will become aware of connections between many of these different issues.

Brams,2009-12-02 Voters today often desert a preferred candidate for a more viable second choice to avoid wasting their vote Likewise parties to a dispute often find themselves unable to agree on a fair division of contested goods In Mathematics and Democracy Steven Brams a leading authority in the use of mathematics to design decision making processes shows how social choice and game theory could make political and social institutions more democratic Using mathematical analysis he develops rigorous new procedures that enable voters to better express themselves and that allow disputants to divide goods more fairly One of the procedures that Brams proposes is approval voting which allows voters to vote for as many candidates as they like or consider acceptable There is no ranking and the candidate with the most votes wins The voter no longer has to consider whether a vote for a preferred but less popular candidate might be wasted In the same vein Brams puts forward new more equitable procedures for resolving disputes over divisible and indivisible goods
