Tribal Science Mike Mcrae,2012-05-08 Human beings evolved in a tribal environment Over the millennia our brains have become adept at fostering social networks that are the basis of group cohesion from the primary family unit to the extended associations of clans villages cities and nations This essential social component of our behavior gave the human species distinct survival advantages in coping with the challenges of an often hostile environment This book examines the many ways in which our tribally oriented brains perceive and sometimes distort reality The author describes how our social nature led to the development of cognitive tricks that have served us so well as a social species Some examples are our habit of imposing patterns on random phenomena of weaving entertaining narratives to explain the mysteries of the universe and of favoring the biases of group think Luckily we also stumbled upon science which McRae views as a fortuitous accident With this new technique humans had discovered a method of objectively evaluating the accuracy of our traditional tribal notions Even more important the scientific method proved to be self correcting allowing us to weed out the bad ideas from those that really work McRae argues that science is our most successful social enterprise to date Through the sharing of scientific ideas our species has expanded the reach of the tribal community to a global scale Our problems may be bigger than ever but science gives us a sure basis in reality and the best method of facing the daunting challenges of the future **The Science of**

legitimate branch of biology in public educational institutions nor should the philosophy of religion be a legitimate branch of philosophy So argues acclaimed author John W Loftus in this forceful takedown of the very discipline in which he was trained In his call for ending the philosophy of religion he argues that as it is presently being practiced the main reason the discipline exists is to serve the faith claims of Christianity Most of philosophy of religion has become little more than an effort to defend and rationalize preexisting Christian beliefs If subjects such as biology chemistry physics and geology are all taught without reference to faith based supernatural forces as explanations faith based teachings should not be acceptable in this discipline either While the book offers a fascinating study of the fallacies and flaws on which one whole field of study rests it speaks to something much larger in the ongoing culture wars By highlighting the stark differences between faith based reasoning and evidence based reasoning Loftus presents vital arguments and lessons about the importance of critical thinking not only in all aspects of study but also in life His conclusions and recommendations thus resonate far beyond the ivory towers and ivy

covered walls of academic institutions The extended self Chris Abel, 2016-10-28 In this wide ranging study of architecture and cultural evolution the author argues that underlying the global environmental crisis is a general resistance to changing personal and social identities shaped by a technology based culture and its energy hungry products The book traces the roots of that culture to the coevolution of Homo sapiens and technology from the first use of tools as artificial extensions of the human body to the motorised cities spreading around the world whose uncontrolled effects are changing the planet itself Advancing a new concept of the meme called the technical meme as the primary agent of cognitive extension and technical embodiment the author proposes a theory of the extended self encompassing material and spatial as well as psychological and social elements Drawing upon research from philosophy psychology and the neurosciences the book presents a new approach to environmental and cultural studies that will appeal to a broad readership searching for insights into the crisis
