

REAR ARM (MODELS WITH QUICK ADJUST SYSTEM)

GENERAL

During assembly/installation, use torque values and service products as in the exploded views. Clean threads before applying a threadlocker. Refer to **SELF-LOCKING FASTENERS** and **LOCITE APPLICATION** at the beginning of this manual for complete procedure.

**WARNING**

Torque wrench tightening specifications must be strictly adhered to. Locking devices when removed (e.g., locking tabs, center pins, etc.) must be replaced.

NOTE: Hoses, cables and locking tie removed during a procedure must be reinstalled as per factory standards.

ADJUSTMENT
REAR SUSPENSION
ADJUSTMENTS

- ADJUSTMENT COMPONENTS**
- 1. Stopper strap
 - 2. Center spring
 - 3. Rear wheel
 - 4. Rear spring
 - 5. Coupling blocks (left side shown)

NOTE: Whenever adjusting rear suspension, check track tension and adjust if necessary.

Stopper Strap

Stopper strap length has an effect on the amount of weight the center spring has to carry especially during acceleration, therefore on the front and up lift. Stopper strap length also has an effect on center spring travel.

NOTE: Whenever stopper strap length is changed, track tension must be checked.

ACTION	RESULT
Increasing stopper strap length	Lighter on pressure under acceleration
	More center spring travel
	More bump absorption capability
Decreasing stopper strap length	Heavier on pressure under acceleration
	Less center spring travel
	Less bump absorption capability

- NOTE:**
- 1. Stopper strap
 - 2. Rear wheel
 - 3. Center spring
 - 4. Coupling blocks (left side shown)

NOTE: Decreasing the stopper strap length may reduce comfort. If too much weight transfer is felt, try to correct it by adjusting the coupling blocks first. Always install stopper strap bolt as close as possible to the lower shaft.

When operating the snowmobile in deep snow, it may be necessary to vary stopper strap length and/or riding position, to change the angle at which the track rides on the snow. Operator's familiarity with the various adjustments as well as snow conditions will denote the most efficient combination.

Generally, a longer stopper strap setting gives better performance in deep snow on a flat landscape.

Center Spring

Center spring preload has an effect on steering effort, handling and bump absorption.
