

Renewable and Non-Renewable Resources

The world's population is growing at an exponential rate! With this growth, towns, cities, and entire countries are growing as well. With this fast-paced growth comes the need for more and more energy. As the demand for energy increases, governments and companies are faced with the difficult decision of how to help meet this increasing demand for energy, which supports the growth of societies and human progress. Part of this decision-making process includes whether to incorporate and make use of energy sources which are **renewable** or **non-renewable**. Both types have their pros and cons. For example, **renewable** sources are replenishable and usually have less impact on the environment, while they are at times limited in how much energy they can provide at a specific moment in time. On the other hand, **non-renewable** sources are typically inexpensive and abundant, but will eventually run out if we do not take care to preserve them.

times limited in how much energy they can provide at a specific moment in time. On the other hand, **non-renewable** sources are typically inexpensive and abundant, but will eventually run out if we do not take care to preserve them.

Instructions: In the table below, research some different types of **renewable** and **non-renewable** energy sources. Give an **example of somewhere in the world** where this type of energy is being used, and then include an **advantage** and **disadvantage** for each type of energy source.

Renewable:	World example:	Advantage:	Disadvantage:
E.g., Solar power	Shams One Project (United Arab Emirates)	Low impact on environment	takes a lot of space
Non-Renewable:	World example:	Advantage:	Disadvantage:
