

2. Change fuel filter elements as needed every 250 - (500 maximum) hours of operation. Fuel filter changes must be more often with water evidence or contaminated fuel. Unlock and open the right rear engine access door. Clean the area around the fuel filter head. Remove the pre-filter and fuel filter cannisters (Figure 32). For S/N 1604 thru 9908 the engine is equipped with a single fuel filter/water separator cannister (Figure 32A). Discard the filter cannisters and sealing rings. Clean the sealing surfaces of the filter head. Fill the new cannisters with clean No. 2 Diesel Fuel and lubricate the sealing rings with clean lubricating oil. Install the filters by hand tightening only. **DO NOT** over tighten. Close and lock access door.

NOTE: Mechanical over-tightening may distort the threads or damage the sealing rings.

Controlled venting is provided at the injection pump through the fuel drain manifold. Small amounts of air introduced by changing the filter elements will be vented automatically as long as the elements were filled with fuel prior to installation.

NOTE: Marginal fuel cleanliness conditions will require fuel system service more often. Loss of engine power is often caused by dirty fuel filters.
