Operationalization of Remote Sensing Solutions for Sustainable Forest Management Gintautas Mozgeris, Ivan Balenovic, 2021-06-02 The great potential of remote sensing technologies for operational use in sustainable forest management is addressed in this book which is the reprint of papers published in the Remote Sensing Special Issue Operationalization of Remote Sensing Solutions for Sustainable Forest Management The studies come from three continents and cover multiple remote sensing systems including terrestrial mobile laser scanning unmanned aerial vehicles airborne laser scanning and satellite data acquisition and a diversity of data processing algorithms with a focus on machine learning approaches The focus of the studies ranges from identification and characterization of individual trees to deriving national or even continental level forest attributes and maps There are studies carefully describing exercises on the case study level and there are also studies introducing new methodologies for transdisciplinary remote sensing applications Even though most of the authors look forward to continuing their research nearly all studies introduced are ready for operational use or have already been implemented in practical forestry Final Solutions Richard M. Lerner, R. C. Lewontin, Benno Muller-Hill, 2010-11 The nature nurture debate continues to stir controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in

1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co opted to serve the political agenda of today s reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races *Catalog of Copyright Entries.
