Slickline Operation Manual:

Grouting Equipment Manual Donald C. Hegebarth, 2013 Pressure grouting is an essential construction procedure that is practiced by contractors and engineers around the world. Used since the 19th century, grouting reduces the amount of leakage through rock for dam foundations and underground works. It also strengthens soils to provide a stable foundation to support the weight of surface structures such as buildings, bridges, and storage tanks. In addition, it is frequently used to repair deteriorated concrete and to produce concrete underwater. This manual introduces various types of equipment employed in pressure grouting applications performed in geotechnical works and examines the operating principles and maintenance issues relative to each equipment type. The term pressure grouting encompasses a wide variety of applications and operations, including dam foundation grouting, soil stabilization, and permeation consolidation and compaction grouting, except low mobility water cutoff and structural stabilization in rock tunnels, deep foundations via drilled piers, underwater concrete structural concrete repairs, raising of settled slabs and structures, rock and soil anchors, and machine foundations and bases. The applications for pressure grouting operations are almost limitless as the equipment can be employed anywhere fluid grout can be used. Primarily intended for machine operators and maintenance mechanics, this manual will also prove useful to specification writers, engineers, contractors, purchasing managers, and others who have a responsibility to specify, acquire, operate, or maintain pressure grouting equipment. Topics covered include mixers, agitators, pumps, delivery systems, and accessories, but not electronic monitoring and other ancillary equipment. **Concrete Manual** United States. Artefact Kinds Maarten Franssen,Peter Kroes,Thomas A.C. Reydon,Pieter E. Vermaas,2013-10-04 This book is concerned with two intimately related topics of metaphysics the identity of entities and the foundations of classification What it adds to previous discussions of these topics is that it addresses them with respect to human made entities that is artefacts As the chapters in the book show questions of identity and classification require other treatments and lead to other answers for artefacts than for natural entities These answers are of interest to philosophers not only for their clarification of artefacts as a category of things but also for the new light they may shed on these issue with respect to to natural entities This volume is structured in three parts The contributions in Part I address basic ontological

and metaphysical questions in relation to artefact kinds How should we conceive of artefact kinds Are they real kinds How are identity conditions for artefacts and artefact kinds related The contributions in Part II address meta ontological questions What exactly should an ontological account of artefact kinds provide us with What scope can it aim for Which ways of approaching the ontology of artefact kinds are there how promising are they and how should we assess this In Part III the essays offer engineering practice rather than theoretical philosophy as a point of reference The issues addressed here include How do engineers classify technical artefacts and on what grounds What makes specific classes of technical artefacts candidates for ontologically real kinds and by which criteria *Proceedings of the ...
