Transients and Longitudinal Waves: During a strong wind or an earthquake, the deep-seated layers of a fluid medium can be set into motion, and these give rise to *transients* that propagate as *transient waves*. In a fluid, transients propagate as *longitudinal* or *compressional* waves, and in a solid, they propagate as *longitudinal* or *shear* waves. The propagation of these waves is governed by the *equations of motion* and the *boundary conditions* at the interfaces between the different layers of the medium.
