Tropical Cool: A Buddhist Manual of Air

Conditioning ,2018-02-03 A case can be made and has been made by Pope Francis that the extensive use of air conditioning use in the developed world especially the United States is a careless excess and poor example to the rest of the world Indeed it makes a mockery of the current ideology of energy sustainability including concerns about prevention of global warming Extension of wasteful practices of air conditioning to emerging economies like India is easily shown to be unsustainable As with other recalcitrant problems such as over reliance on cars and poor personal health and dietary habits smoking processed foods the source of the problem is found individual moral choices that are championed as individual freedoms but actually represent a degenerate morality which yields more benefit to corporations and big government than to people The Buddhist ethic provides one path into the heart of human choices illuminating as it does the incorrect thinking that underlies bad choices including those that most people think are based on common sense and scientific expertise This book applies this idea to the matter of air conditioning using Thailand and like Southeast Asian settings as an example It makes the claim that emerging western interest in mindfulness could be leveraged to introduce new thinking on personal energy use that will go much further to create true sustainability than programs based on harnessing geophysical technologies such as solar and wind
