Laboratory and Field Activities in General Zoology , **Frog Neurobiology** R. Llinas, W. Precht, 2012-12-06 In review the amount of information available on the morphological and functional properties of the frog nervous system is very extensive indeed and in certain areas is the only available source of information in vertebrates Further more much of the now classical knowledge in neurobiology was originally obtained and elaborated in depth in this vertebrate To cite only a few examples studies of nerve conduction neuromuscular transmission neuronal integration sense organs development and locomotion have been developed with great detail in the frog and in conjunction provide the most complete holistic description of any nervous system Added to the above considerations the ease with which these animals may be maintained both as adults and during development and the advantage of their lower cost as compared with other vertebrate forms make the frog one of the most important laboratory animals in neurobiology With these thoughts in mind we decided to compile this volume Our goal in doing so was to assemble as much as possible of the information available on frog neurobiology and to have the different topics covered by authorities in each of the fields represented To keep the handbook restricted to one volume we found it necessary to omit the large field of amphibian muscle neurobiology which has already been summarized in various other publications **The School News and Practical Educator** , 1916 *Laboratory Outlines in Plant Pathology* Herbert Hice Whetzel, Lexemuel Ray Hesler, Charles Truman Gregory, William Howard Rankin, 1916 **School Library Journal** , 2007-02 **Biochemistry of the Eye** Elaine R. Berman, 2013-11-22 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the Biochemistry of the Eye is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue **Advances in Protein Chemistry** , 1955-01-01 *Advances in Protein Chemistry* **Bulletin of the Atomic Scientists** , 1986-04 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan
