2. The Newcomen engine worked, but not very efficiently.
3. John Watts's addition of another cylinder that was cooled, all parts of the engine were able to maintain the same temperature and therefore had more energy with less heat and fuel.
4. It would be just as important to save money, but also to conserve, conserve, and improve. The steam engine would power the Industrial Revolution.
5. Not the changes brought on by the steam engine were revolutionary in their scope.
