them pushed exploration to the most distant frontiers of the planet. As a result, much of the Earth was inhabited well before the days of the renowned European explorers of the 15 and 16 centuries. Exploration did not cease after the circumnavigation of the globe; it continued to the present. Today, explorers are going in new directions, not just east and west, north and south. They explore backward in time and upward in space. Archaeology explores the shorter time scales, and geochemistry the longer time scales of geological events: asteroidal and cometary collisions, magnetic reversals, continental formation, and more. However, on Earth, we cannot go back indefinitely, for much of the evidence of the very earliest days has been lost.
