## Apex Algebra 2 Semester 1 Quiz Answers

### Apex Algebra 2 Semester 1 Quiz Answers

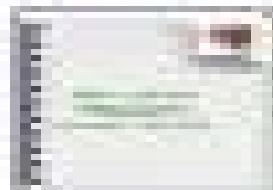

Answers to the Apex Algebra 2 Semester 1 Quiz are listed below. The answers are provided for your reference only. The answers are not intended to be used as a study guide.

1. The first step in solving a system of linear equations is to write the equations in slope-intercept form. This allows you to compare the slopes of the lines. If the slopes are different, the lines are not parallel and the system has one solution. If the slopes are the same, the lines are either parallel or coincident. If the lines are parallel, the system has no solution. If the lines are coincident, the system has infinitely many solutions.

2. The second step in solving a system of linear equations is to use the elimination method. This involves adding or subtracting the equations to eliminate one of the variables. This allows you to solve for the other variable. Once you have solved for one variable, you can substitute that value back into one of the original equations to solve for the other variable.

3. The third step in solving a system of linear equations is to check your solution. This involves substituting the values of the variables into both equations to see if they satisfy both equations. If the values do not satisfy both equations, then the solution is incorrect. If the values do satisfy both equations, then the solution is correct.

These answers are provided for your reference only. The answers are not intended to be used as a study guide.
