Technical Analysis - Myth or Magic? Christian Koessler, 2010-12-23

Inhaltsangabe Introduction The following paper will outline the suitability of Technical Analysis TA regarding selective chosen tools for performance increase versus the classic Buy and Hold Strategy BHS These two approaches beside the Fundamental Analysis FA are the foundations used by investors concerning their Investment strategy and differ substantially in their nature Thereby this dissertation will investigate whether the application of active TA is a productive approach yielding to favourable results and having the ability to outperform the passive BHS To achieve substantive results the comparisons of performances will be stretched to 21 years and are based on the following three indices which differ significantly concerning their location volume and importance Standard 200 days and 100 days Moving Average Convergence Divergence Bollinger Bands Oscillators Relative Strength Index Slow Stochastic Momentum TA can be divided into Chartism and the statistical based TA Although a clear demarcation between these groups is not given in reality as most proponents of TA combine both techniques The vast majority of this dissertation will only reflect the latter This can also be justified as Chartists predict future price developments based on trend lines patterns and formations Murphy 1999 states that all Chartists are Technical Analysts but not all Technical Analysts are Chartists Due to the lack of standardised price characteristics Chartism implies a high degree of subjectivity Therefore the absence of operational ability of this sub area

would not lead to a feasible analysis concerning an increase in performance We maintain that financial markets are either moving in boom or bust cycles Bull or Bear Markets The classic BHS based on the Investment Legend Benjamin Graham has generated high profits in the **Technical Analysis of Stock Trends, Tenth Edition** Robert D. Edwards, John Magee, W.H.C. Bassetti, 2012-11-28 Sixty three years Sixty three years and Technical Analysis of Stock Trends still towers over the discipline of technical analysis like a mighty redwood Originally published in 1948 and now in its Tenth Edition this book remains the original and most important work on this topic The book contains more than dry chart patterns it passes down accumulated experience and wisdom from Dow to Schabacker to Edwards and to Magee and has been modernized by W H C Bassetti Bassetti a client friend and student of John Magee one of the original authors has converted the material on the craft of manual charting with TEKNIPLAT chart paper to modern computer software methods In actuality none of Magee's concepts have proven invalid and some of his work predated modern concepts such as beta and volatility In addition Magee described a trend following procedure that is so simple and so elegant that Bassetti has adapted it to enable the general investor to use it to replace the cranky Dow Theory This procedure called the Basing Points procedure is extensively described in the new Tenth Edition along with new material on powerful moving average systems and Leverage Space Portfolio Model generously contributed by the formidable analyst Ralph Vince author of Handbook of Portfolio Mathematics See what's new in the Tenth Edition Chapters on replacing Dow Theory Update of Dow Theory Record Deletion of extraneous material on manual charting New chapters on Stops and Basing Points New material on moving average systems New material on Ralph Vince's Leverage Space Portfolio Model So much has changed since the first edition yet so much has remained the same Everyone wants to know how to play the game The foundational work of the discipline of technical analysis this book gives you more than a technical formula for trading and investing it gives you the knowledge and wisdom to craft long term success Technical Methods of Analysis Roger Castle Griffin, 1927 **Technical Analysis**
