Genetics and the Behavior of Domestic Animals Anna V. Kukekova, Lyudmila N. Trut, Gregory M. Acland, 2013-04-22 Dog domestication involved long term genetic selection for behavior The genetics centered view of domestication is supported by experimental selection of farm foxes *Vulpes vulpes* that began in the 1950s Selection of foxes separately for tame and for aggressive behavior has yielded two strains with markedly different genetically determined behavioral phenotypes Tame strain foxes communicate with humans in a positive manner and are eager to establish human contact Foxes from aggressive strains are aggressive to humans and difficult to handle Although selected solely for behavior changes in physiology morphology and appearance with significant parallels to characteristics of the domestic dog were observed in tame strain Ongoing research is focused on identification of molecular genetic mechanisms associated with selection of foxes for behavior Identification of behavioral loci in the fox genome in the region which is homologous to the region in the dog genome that differentiates dogs from wolves lead to the hypothesis that domesticated behavior in dogs and foxes may have similar genetic bases

Wolves and Dogs Friederike Range, Sarah Marshall-Pescini, 2022-08-09 Various parallels have been drawn between wolves and humans from the perspective of their social organisation. Therefore studying wolves may well shed light on the evolutionary origins of complex human cognition and in particular on the role that cooperation played in its development. Humans closely share their lives with millions of dogs, the domesticated form of wolves. Biologically, wolves and dogs can be considered to be the same species, yet only dogs are suitable living companions in human homes, highlighting the importance of cognitive and emotional differences between the two forms. The behaviour of wolves and dogs largely depends on the environment the animals grew up and live in. This book reviews more than 50 years of research on the differences and similarities of wolves and dogs. Beyond the socio ecology, the work explores different theories about when and how the domestication of wolves might have started and which behaviours and cognitive abilities might have changed during this process. Readers will discover how these fascinating animals live with their conspecifics in their social groups, how they approach and solve problems in their daily lives and how they see and interact with their human partners.
