The Whole Part Alec Rogers, 2020-04-24 The Whole Part describes a basic model of cognition that uses parts wholes and references to analyze both our material and mental experience The framework of continuous epistemological space rather than discrete symbolic logic is used to provide a formal foundation for thinking about reality Mereological analysis of that space examines things in terms of their whole part relationships and referential analysis of that space examines things in terms of their reference referent relationships These analyses are used to illustrate the structure of our minds Since our mental structures determine how reality is sensed and conceptualized understanding these structures clarifies which aspects of our experience are due to the world and which are due to various facets of our cognition You will particularly enjoy this book if you are interested in how our minds work since it explores the structure and operation of our cognition in great detail

To do so a basic model is constructed that provides an understanding of the relationship of wholes to parts references to referents and how those relationships influence and are influenced by cognition This model is simple enough to be independent of various complexities in neuroscience and physics although it is both motivated by those sciences and entirely compatible with them *Novice* Nida Sophasarun,2025-04-03 How close can a person come to home when their family has deserted it Guided by this question the poems in Nida Sophasarun s *Novice* traverse natural animal and dream worlds seeking intimacy in a snake coming in from the rain a mother s body imagined as a house and the moon serving as both the missing piece and the linchpin in a night sky Organized by tropical seasons and unfolding in Asia and the American South *Novice* proposes that home is monumental and ruined remembered and forgotten local and diffuse peopled and haunted
