The Nobel Collection, Volume 1 Robert Knight, Idan Segev, 2023-01-30 Humans are highly curious we are eager to understand ourselves and the world around us and we love the feeling of discovering something new Some people choose to become scientists and devote their lives to exploring and understanding the laws of nature and life itself A scientific understanding of the natural world is critical for developing new technologies and materials and for curing devastating diseases Every scientist makes discoveries that contribute to the constantly expanding body of human knowledge Occasionally scientists even discover entirely new phenomena that transform the way we understand the universe Think of Albert Einstein's famous theories for example or the pioneering work of Marie Skłodowska Curie which led to the discovery of new elements and advanced the treatment of certain cancers Indeed her discovery of radioactivity paved the way for both the diagnosis via X rays and treatment of cancer via radiation therapy Groundbreaking discoveries such as these usually result from a combination of knowledge dedication brilliance and good luck Each year we celebrate these transformative discoveries by awarding Nobel Prizes in chemistry physics economics and physiology or medicine These prizes represent our highest level recognition of the scientific accomplishments that have changed the world for the better Now in 2021 exactly 120 years after the first Nobel Prize was awarded we launch this special Nobel Collection in Frontiers for Young Minds This Collection brings you articles by Nobel laureates written specifically for young minds In this first of its kind collection Nobel Prize winners explain their amazing discoveries and describe how they accomplished them These Nobel laureates share their thoughts on research and what it means to be a scientist and they even provide advice for becoming a successful researcher and living a happy meaningful life Like all Frontiers for Young Minds articles these articles have been reviewed and approved by kids like you Did you know that Nobel Prize winners and Young Minds readers have several important traits in common The first is curiosity The scientific journeys of Nobel laureates are often fueled by an intense child like curiosity the same curiosity that motivates you to read these articles Many Nobel laureates also manage to stay as open minded as Young Minds readers they keep their opinions flexible and can be persuaded to change their minds when new data challenges their existing beliefs In the words of 2014 Nobel laureate May Britt Moser I believe that it is important to maintain your curiosity about things both now and as an adult and find something that you have a passion for that makes you enthusiastic and feel alive For myself I can say that I am very curious about things and that it is extremely important for me to understand things It gives me so much pleasure when I understand something that I did not understand before this is my leading star We hope that this unique new Collection will be your leading star that it will help you to further develop your own curiosity and openness and that it inspires you reach for new discoveries in your own life

Escape* David Adams,2020-03-13 Are the conspiracy theorists both right and wrong Could it be that Roswell and Area 51 are just red herrings That governments are hiding not past contacts but the prospect of a dangerous future contact This is the story of two remarkable young women and their journey of discovery Set against that background without knowing why their work is supported by world governments they will lead humans to the stars *The Little Book of Exoplanets* Joshua N. Winn,2023-07-11 A concise and accessible introduction to exoplanets that explains the cutting edge science behind recent discoveries For centuries people have speculated about the possibility of planets orbiting distant stars but only since the 1990s has technology allowed astronomers to detect them At this point more than five thousand such exoplanets have been identified with the pace of discovery accelerating after the launch of NASA s Transiting Exoplanet Survey Satellite and the Webb Space Telescope In *The Little Book of Exoplanets* Princeton astrophysicist Joshua Winn offers a brief and engaging introduction to the search for exoplanets and the cutting edge science behind recent findings In doing so he chronicles the dawn of a new age of discovery

one that has rapidly transformed astronomy and our broader understanding of the universe Scientists now know that many Sun like stars host their own systems of planets some of which may resemble our solar system and include planets similar to the Earth But Winn tells us the most remarkable discoveries so far have been of planets with unexpected and decidedly un Earth like properties which have upended what we thought we knew about the origins of planetary systems Winn provides an inside view of the sophisticated detective work astronomers perform as they find and study exoplanets and describes the surprising sometimes downright bizarre planets and systems they have found He explains how these discoveries are revolutionizing astronomy and he explores the current status and possible future of the search for another Earth Finally drawing on his own and other scientists work he considers how the discovery of exoplanets and their faraway solar systems changes our perspectives on the universe and our place in it
