The Federal Food Safety Working Group Progress Report:

The Federal Food Safety Working Group Progress Report The White The White House,2014-11-14 American consumers deserve to trust the safety of the food they purchase for themselves and their families While we enjoy one of the safest food supplies in the world it requires constant monitoring We need to be able to rapidly identify and address risks to our food supply as a result of new disease agents new food technologies changes in U S demographic and dietary patterns and an abundance of food imports resulting from an increasingly globalized food supply In recent years consumers and industry alike have been impacted by illnesses associated with food products such as ground beef peppers peanut butter spinach shell eggs and cookie dough among others While regulatory and industry efforts have over time improved food safety considerably the Centers for Disease Control and Prevention has recently estimated that 1 in 6 Americans suffers from foodborne illness annually resulting in 128 000 hospitalizations and 3 000 deaths per year most of which are preventable The public health consequences of foodborne illness remain significant The impact reaches well beyond the number of cases Foodborne illnesses result in billions of dollars in medical costs as well as significant economic losses to the food industry when illness outbreaks and contamination incidents undermine consumer confidence in affected commodities require large recalls and diminish demand American consumers have high expectations for the safety of the food supply While all risks will never be eliminated the public rightfully expects that the government and the food industry do everything that can reasonably be done to prevent food safety problems The federal government has taken important steps to protect an increasingly complex food supply In March 2009 President Obama created the Food Safety Working Group FSWG a central coordinating mechanism for the federal government s food safety activities that is led by the Department of Health and Human Services HHS and the U S Department of Agriculture USDA The FSWG s core mission is to strengthen federal efforts and develop short term and long term strategies to improve food safety Partner agencies include HHS s Food and Drug Administration FDA USDA s Food Safety and Inspection Service FSIS and HHS s Centers for Disease Control and Prevention CDC as well as the Environmental Protection Agency EPA Department of Homeland Security Department of Commerce Department of State and the Office of the United States Trade Representative The White House Domestic Policy Council convenes the FSWG The premise underlying the FSWG s creation is that coordination among federal agencies is essential to protect consumers in our highly diverse global food system Coordination and cooperation are necessary through every stage of the production and consumption process from farm to table FSWG member departments and agencies thus share information and experience about all aspects of food safety Such coordination strengthens the scientific and technical infrastructure to support a modern food safety system *The Federal Food Safety Working Group Progress Report* United States Executive Office of the President,2011 In March 2009 President Obama created the Food Safety Working Group FSWG a central coordinating mechanism for the federal government s food safety activities that is led by the Department of

Health and Human Services HHS and the U S Department of Agriculture USDA The FSWG s core mission is to strengthen federal efforts and develop short term and long term strategies to improve food safety P 1 *Outbreak* Timothy D. Lytton, 2019-04-16 Foodborne illness is a big problem Wash those chicken breasts and you re likely to spread Salmonella to your countertops kitchen towels and other foods nearby Even salad greens can become biohazards when toxic strains of E coli inhabit the water used to irrigate crops All told contaminated food causes 48 million illnesses 128 000 hospitalizations and 3 000 deaths each year in the United States With *Outbreak* Timothy D Lytton provides an up to date history and analysis of the US food safety system He pays particular attention to important but frequently overlooked elements of the system including private audits and liability insurance Lytton chronicles efforts dating back to the 1800s to combat widespread contamination by pathogens such as E coli and salmonella that have become frighteningly familiar to consumers Over time deadly foodborne illness outbreaks caused by infected milk poison hamburgers and tainted spinach have spurred steady scientific and technological advances in food safety Nevertheless problems persist Inadequate agency budgets restrict the reach of government regulation Pressure from consumers to keep prices down constrains industry investments in safety The limits of scientific knowledge leave experts unable to assess policies effectiveness and whether measures designed to reduce contamination have actually improved public health *Outbreak* offers practical reforms that will strengthen the food safety system s capacity to learn from its mistakes and identify cost effective food safety efforts capable of producing measurable public health benefits
