Computing Attitude and Affect in Text: Theory and Applications James G. Shanahan,Yan Qu,Janyce Wiebe,2006-01-17 Human Language Technology HLT and Natural Language Processing NLP systems have typically focused on the factual aspect of content analysis Other aspects including pragmatics opinion and style have received much less attention However to achieve an adequate understanding of a text these aspects cannot be ignored The chapters in this book address the aspect of subjective opinion which includes identifying different points of view identifying different emotive dimensions and classifying text by opinion Various conceptual models and computational methods are presented The models explored in this book include the following distinguishing attitudes from simple factual assertions distinguishing between the author s reports from reports of other people s opinions and distinguishing between explicitly and implicitly stated attitudes

In addition many applications are described that promise to benefit from the ability to understand attitudes and affect including indexing and retrieval of documents by opinion automatic question answering about opinions analysis of sentiment in the media and in discussion groups about consumer products political issues etc brand and reputation management discovering and predicting consumer and voting trends analyzing client discourse in therapy and counseling determining relations between scientific texts by finding reasons for citations generating more appropriate texts and making agents more believable and creating writers aids The studies reported here are carried out on different languages such as English French Japanese and Portuguese Difficult challenges remain however It can be argued that analyzing attitude and affect in text is an NLP complete problem

On the Learning of Chinese ,2010-01-01 Although more people speak Chinese than any other language on Earth proficiency in Chinese is largely confined to the people who live in or adjacent to the Chinese Mainland and Taiwan and to the ethnic Chinese inhabitants of the various Chinatowns in countries around the world Despite its allure many people find Chinese a hard language to learn including a

considerable number of children who learn it as mother tongue The basic units of written Chinese are ideographic symbols called characters and the meaning and pronunciation of each character is determined by the tone attached to it by the speaker Facing the very large number of Chinese characters and words it seems impossible for learners regardless of their native language to master the language other than via rote memorization The attempt to facilitate the route to proficiency in Chinese has understandably attracted the attention of numerous psycholinguistic researchers and educators Using the Theory of Variation as the primary learning framework the authors of this book conducted a number of large scale and robustly designed studies to investigate the relationship between the learning and teaching of Chinese mostly among native speakers However we believe that the results are applicable to the learning of Chinese as a second language Studies into ways of understanding the phonological and orthographical acquisition of characters are reported ways of helping learners come to terms with reading Chinese a textual language that does not always correspond word for word with the spoken discourse are explained and the implications of the evidence for Chinese curriculum and syllabus design are pointedly addressed by the contributors The authors believe that there are effective ways to become skilled in Chinese and that learning Chinese can be pleasurable and interesting They provide empirical evidence for educators parents policymakers and readers interested in Chinese language education They also illuminate the path to the mastery of Chinese in schools and how Chinese should be taught in today s world

How Brains Think William H. Calvin,2014-11-25 If you re good at finding the one right answer to life s multiple choice questions you re smart But intelligence is what you need when contemplating the leftovers in the refrigerator trying to figure out what might go with them or if you re trying to speak a sentence that you ve never spoken before As Jean Piaget said intelligence is what you use when you don t know what to do when all the standard answers are inadequate This book tries to fathom how our inner life evolves from one topic to another as we create and reject alternatives Ever since Darwin we ve known that elegant things can emerge indeed self organize from simpler beginnings And says theoretical neurophysiologist William H Calvin the bootstrapping of new ideas works much like the immune response or the evolution of a new animal species except that the brain can turn the Darwinian crank a lot faster on the time scale of thought and action Drawing on anthropology evolutionary biology linguistics and the neurosciences Calvin also considers how a more intelligent brain developed using slow biological improvements over the last few million years Long ago evolving jack of all trades versatility was encouraged by abrupt climate changes Now evolving intelligence uses a nonbiological track augmenting human intelligence and building intelligent machines
