100

### Learning Objectives

- understand the chemical theory underlying titration and how it
- applies the appropriate pH of a substance in a test
- interpret and explain the shape of titration curves
- use an indicator substance that reacts preferentially to react with an analyte
- use titration to determine the concentration of an analyte
- illustrate an appropriate indicator through a titration curve of typical bases

101

### Materials

acid, analyte, base, indicators, pipettes, burets, indicator, phenolphthalein, sodium hydroxide, pH, strong acid, strong base, weak acid, weak base, weak acid, weak base

102

### Lesson Overview

Students are introduced to the concept of titration, which is a chemical reaction between an acid and a base. The reaction is used to determine the concentration of an acid or base. The reaction is used to determine the concentration of an acid or base. The reaction is used to determine the concentration of an acid or base.

If the concentration of the acid (or base) is unknown, it can be determined by titrating a known amount of acid (or base) with a known concentration of base (or acid). This process, called titration, is explained in the lesson plan.

The following activities are suggested for this lesson:

- Activity 1: Students determine the concentration of an acid (or base) by titrating a known amount of acid (or base) with a known concentration of base (or acid).
- Activity 2: Students use indicators to determine the concentration of an acid (or base) by titrating a known amount of acid (or base) with a known concentration of base (or acid).
- Activity 3: Students explain the chemical theory underlying titration.

103

### Suggested Student Responses

- For Student Activity: **Interpretation of Results**

Students will be able to interpret the results of their titration. They will be able to determine the concentration of an acid (or base) by titrating a known amount of acid (or base) with a known concentration of base (or acid). They will be able to explain the chemical theory underlying titration. They will be able to use indicators to determine the concentration of an acid (or base) by titrating a known amount of acid (or base) with a known concentration of base (or acid).
