Below it is the stratum lucidum, a thin, translucent layer. The stratum granulosum is a thin layer containing dark-staining granules. The stratum spinosum is a thick layer of cells with prominent spiny projections. The stratum germinativum is the deepest layer, containing a layer of cells just above the dermis.

It distinguishes itself by its scholarship, its comprehensive treatment of all aspects of this specific subject, its accessibility, and especially its focus. The editors have brought together international researchers to give an evidence-based presentation of the stratum corneum. From consumer demands and dandruff to aging and water absorption, these experts profile everything about this part of the skin, and they do so in a highly detailed but straightforward way. Dermatologists will find *The Essential Stratum Corneum* to be the standard text on the subject. *The Essential Med Notes* Jesse M. Klostranec, 2012 This text presents the most comprehensive resource available that focuses on exam preparation for the MCCQE Part 1 and the USMLE Step 2.
