Development document for the proposed effluent limitations guidelines and standards for the meat and poultry products industry point source category (40 CFR 432), **Biosecurity and Bioterrorism**

Jeffrey Ryan, Jan Glarum, 2011-08-30 Biosecurity and Bioterrorism is the first book to take a holistic approach to biosecurity with coverage of pathogens, prevention and response methodology. The book is organized into four thematic sections. Part I provides a conceptual understanding of biowarfare, bioterrorism and the laws we have to counteract this. Part II investigates known bioagents and the threat from emerging diseases. Part III focuses on agricultural terrorism and food security. Part IV outlines international, US and local initiatives for biodefense and biosecurity. Case studies illustrate biodefense against both

intentional terrorism and natural outbreaks The authors bring an extraordinary combination of experience in academia and the clinical world as well as real world experience in technical and practical matters to their writing They make technical material clear and fascinating for readers with a basic knowledge of biology Ryan and Glarum address the hazards in the context of vulnerability assessments and the planning strategies government and industry can take to prepare for and respond to such events How are these agents used in biowarfare How likely are we to face either a natural outbreak or intentional human animal infection How can we prepare for this effectively

The Baboon in Biomedical Research John L. VandeBerg, Sarah Williams-Blangero, Suzette D. Tardif, 2009-06-04 Nonhuman primates have played critical roles in biomedical research and they are among the few animals whose use in research continues to increase The scientific value of nonhuman primates derives from their close phylogenetic proximity to man and their consequent anatomic physiologic and genetic similarities to man Only nonhuman primates can provide adequate models for many complex physiological and disease processes of humans The baboon is a relative newcomer to the repertoire of nonhuman primates used in biomedical research However in less than 50 years since its first use in the U S it has become one of the most popular laboratory primate species It is larger than the other widely used monkey species making it advantageous for many types of experiments and technological developments It is extraordinarily hardy and highly fecund in captivity It closely resembles humans in a variety of physiological and disease processes such as cholesterol metabolism early stages of

atherosclerosis and alcoholic liver disease Its chromosomes closely resemble those of humans and many genes of the two species lie in the same chromosomal order Among all primates baboons are the most widely used models for the genetics of susceptibility to complex diseases and they are the rst nonhuman primate for which a framework genetic linkage map was established In addition the baboon genome is currently being sequenced and as a result the utility of this species for biomedical research will be dramatically increased
