**Manual of Neonatal Respiratory Care** Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam, 2022-05-09

Respiratory care is the largest overall component of neonatal intensive care and the fifth edition of the Manual of Neonatal Respiratory Care is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant including embryology, principles of mechanical ventilation, procedures and techniques, monitoring devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy, and endotracheal intubation and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry, and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high-flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support ventilation, and pressure control ventilation. The following section segues into high-frequency ventilation, reviewing general concepts, high-frequency jet ventilation, and high-frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the Draeger VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia, among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlight ethical, legal, and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, and home ventilation.

withdrawal of ventilatory support and medical liability and risk management The fifteenth section focuses on research and literature with coverage on interpreting medical literature data collection and assessment of respiratory outcomes and contemporary classics in neonatal respiratory care The final section presents ventilatory case studies The text also features over 300 high yield radiographic images figures tables and algorithms

*Treatment of Psychological Distress in Parents of Premature Infants* Richard J. Shaw, M.D., Sarah Horwitz, Ph.D., 2020-10-07 Although the benefits of psychological consultation in the pediatric setting are well established a gap often exists between the demand for these services and funding We have embarked on our longstanding goal to develop a group based intervention model for parents of premature infants adapting our manual of

individual trauma focused cognitive behavioral therapy to help reduce feelings of parental isolation This book describes a more global approach to psychological consultation in the NICU integrating interventions that begin prior to the infant's conception and extend well beyond the NICU hospitalization Chapter 1 provides a context and review of the medical aspects of the NICU environment and the neurodevelopmental consequences of prematurity In Chapter 2 reviews the common psychological reactions of mothers of premature infants including specific risk factors associated with maternal psychological distress It also discusses the relationship between parental posttraumatic stress and infant outcomes as it relates to such issues as breastfeeding maternal infant interaction attachment and infant development Chapter 3 describes the form and prevalence of symptoms of paternal psychological distress and outline a curriculum for a group based intervention specifically designed to address fathers concerns Chapter 4 addresses developmental care interventions that overlap with interventions more narrowly focused on parental psychological distress Chapters 5 and 6 describe our intervention model in both the individual and group therapy formats Chapter 7 addresses vulnerable child syndrome which is associated with adverse developmental outcomes in children as well as overutilization of health care resources Application of the trauma model to the concept provides a framework to understand how parental behavior is altered in the context of trauma Finally Chapter 8 discusses how to implement a psychological intervention program in the NICU that includes screening the parents of premature infants for symptoms of psychological distress

**Avery's Neonatology** Mhairi G. MacDonald, Mary M.

Seshia, 2015-07-29 The practice of neonatology requires a careful balance between modern technology and the prevention of unintended damage to a newborn Early therapeutics were based on adult medicine with often catastrophic results to the baby As research and understanding of physiology and therapeutics have expanded care of the preterm and sick infant has improved drastically Avery's Neonatology is a practical guide to understanding the pathophysiology of the newborn so that appropriate treatment decisions can be made

**Manual of Simulation in Healthcare** Richard H. Riley, 2008 Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide Simulation and skills centres have become established to integrate simulation into mainstream education in all medical nursing and paramedical fields Borrowing from the experience and methodologies of industries that are using simulation medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation Simulation has been used to enhance the educational experience in a diverse range of fields therefore a wide variety of disciplines are represented The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding equipment staffing and course development and promotion Section two deals with simulators and related training devices that are required to equip a stand alone or institution based centre The features strengths and weaknesses of training devices are presented to help the reader

find the appropriate simulator to fulfil their training requirements There is a guide to producing scenarios and medical props that can enhance the training experience The third section covers adult education and it reviews the steps required to develop courses that comply with best practice in medical education Teaching skills facilitating problem based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education The manual concludes with guides for the major specialties that use simulation including military paediatrics CPR and medical response teams obstetrics and anesthesia
