Warp drive

universal translator: A computer program available in the Voyager main computer. This program can analyze almost any alien language form and translate it into English and vice versa. The universal translator does not work with all language forms, and it has been known to be somewhat unreliable in cases where there has been insufficient time for the computer to analyze the alien language form.

Warp factor: The unit used to measure the speed of faster-than-light travel. Warp factor one is the speed of light. Normal cruising speed for Voyager is Warp 6. Maximum sustainable speed is Warp 9.2. No ship can achieve a speed of Warp 10, the theoretical maximum. Even at the incredible speeds afforded by warp drive, Federation space is still some 75 years away for Voyager. Returning home by normal warp travel is not an option.

warp drive: The main propulsion system of Voyager and most starships. This system enables our ship to travel faster than light, necessary because of the incredibly vast distances between stars. The Voyager warp drive is powered by a matter/antimatter reactor, controlled by dilithium crystals.
