The use of FRP as reinforcement for concrete structures has been growing rapidly in recent years. This state-of-the-art report summarizes the current state of knowledge on these materials. In addition to the material properties of the constituents, i.e., resins and fibers, design philosophies for reinforced and prestressed elements are discussed. When the available data warrant flexure, shear, and bond behavior, and serviceability of the members has been examined. Strengthening of existing structures with FRPs and field applications of these materials are also presented.

Keywords: composite materials; concrete; concrete construction; design; external reinforcement; fiber reinforced plastic (FRP); fibers; mechanical properties; polymer resins; prestressed concrete; reinforced concrete; reinforcement; research; structural analysis; structural elements; structural research; testing; test methods.

ACI Committee Reports, Guides, Standard Practices, and Commentaries are intended for guidance in designing, planning, executing, or inspecting construction and in preparing specifications. Reference to these documents shall not be made in the Project Documents. If items found in these documents are desired to be part of the Project Documents, they should be phrased in mandatory language and incorporated in the Project Documents.

State-of-the-art Report on Fiber Reinforced Concrete, 1982 *State-of-the Art Report on Fiber Reinforced Concrete* American Concrete Institute, 1982 State-of-the-art Report on Fiber Reinforced Concrete American Concrete Institute. Committee 544, 1982 *State-of-the-art Report on Fiber Reinforced Concrete* American Concrete Institute. Committee 544, 1982* **Report 36: Textile Reinforced Concrete - State-of-the-Art Report of RILEM TC 201-TRC** Wolfgang Brameshuber, 2006 **State-of-the-art Report on Fiber Reinforced Plastic (FRP) Reinforcement for Concrete Structures** American Concrete Institute. Committee 440, 1996 State-of-the-art Report on Fiber Reinforced Plastic (FRP) Reinforcement for Concrete Structures ACI Committee 440, 1996 Perspectives in Civil Engineering Jeffrey S. Russell, 2003-01-01 This report contains 27 papers that serve as a testament to the state of the art of civil engineering at the outset of the 21st century as well as to commemorate the ASCE's Sesquicentennial. Written by the leading practitioners, educators, and researchers of civil engineering, each of these peer-reviewed papers explores a particular aspect of civil engineering knowledge and practice. Each paper explores the development of a particular civil engineering specialty, including milestones and future barriers, constraints, and opportunities. The papers celebrate the history, heritage, and accomplishments of the profession in all facets of practice, including construction, facilities, special structures, engineering, mechanics, surveying, and mapping, irrigation and water quality, forensics, computing, materials, geotechnical engineering, hydraulic engineering, and transportation engineering. While each paper is unique, collectively they provide a snapshot of the profession while offering thoughtful predictions of likely developments in the years to come. Together, the papers illuminate the mounting complexity facing civil engineering, stemming from rapid growth in scientific knowledge, technological development, and human populations, especially in the last 50 years. An overarching theme is the need for systems-level approaches and consideration from undergraduate education through advanced engineering, materials, processes, technologies, and design methods and tools. These papers speak to the need for civil engineers of all specialties to recognize and embrace the growing interconnectedness of the global infrastructure economy, society, and the need to work for more sustainable, life-cycle-oriented solutions. While embracing the past and the present, the papers collected here clearly have an eye on the future needs of ASCE and the civil engineering profession. *High Performance Concretes* Paul Zia, 1991 This state-of-the-art report summarizes the results of an extensive search and review of available literature on the mechanical properties of concrete, with particular reference to high performance concrete for highway applications. Included in the review and discussion are the behavior of plastic concrete as well as the strength and deformation characteristics of hardened concrete. Both short-term and long-term effects are considered. Based on the review of the available information, research needs are identified. It is concluded that much research is needed to develop data on the strength and durability properties of concrete which develops high strength, particularly very early strength. *Fibre Reinforced Concrete:*
