

# Half-Life Lab

Before this begins, find your other group and pass this document to a third, preexisting, group of your choice or print this page.

## Purpose

The purpose of this hands-on lab is to model the concept of half-life using a simple, inexpensive radioactive source.

## Materials

- 100 M&M's candies, pretzels, or other small, uniform items with two distinct sides
- container or other small bag/paper bag

## Procedure

1. Place 100 candies in the shoe box, covered side up. The candies will stand for units of a hypothetical radioactive element.
2. Cover the box and shake it vigorously for three seconds. This is one time interval.
3. Remove the lid and check how many candies remained that have their two-distinct sides down. These candies represent the source that decayed during the time interval. Count and record in a table while the number of decayed units and the number of remaining, not-decayed, units.
4. Continue repeating steps two and three until all candies have disappeared or you have reached 10 seconds in the shoe box.
5. Repeat the entire experiment (steps 1-4) at least 5 times and record all data.

## Data and Observations

| Time Interval (seconds) and Number of Units |                 |                 |                 |
