Pro VB 2008 and the .NET 3.5 Platform Andrew Troelsen,2008-08-21 The point of this chapter was to demystify the garbage collection process As you have seen the garbage collector will only run when it is unable to acquire the necessary memory from the m aged heap or when a given AppDomain unloads from memory When a garbage collection does occur you can rest assured that Microsoft s collection algorithm has been optimized by the use of object generations secondary threads for the purpose of object finalization and a managed heap dedicated to host large objects This chapter also illustrated how to programmatically interact with the garbage collector using the System GC class type As mentioned the only time when you will really need to do so is when you are building finalizable or disposable class types Recall that finalizable types are classes that have overridden the virtual System Object Finalize method to clean up unmanaged resources at some time in the future Disposable objects on the other hand are classes or structures that implement the IDisposable interface Using this technique you expose a public method to the object user that can be called to perform internal cleanup ASAP Finally you learned about an of cial disposal pattern that blends both
