What is adaptive immunity Ans - Immune cells recognize and remember specific pathogens (requires days to weeks to develop and is specific for each particular virus)

What is the first line of defense that is in innate defenses Ans - Skin, mucus, ear wax, tears, stomach acid, ciliated respiratory tract cells (Other defenses include white blood cells, macrophages, dendritic cells, and natural killer cells)

What are macrophages Ans - Ingest and kill pathogens, including viruses, by phagocytosis, and present in tissues throughout the body

Activated macrophages produce _____ which trigger the hypothalamus to produce prostaglandins (induce fever, an innate antiviral response) Ans - Pyrogens

What are dendritic cells Ans - Ingest and kill pathogens, including viruses, by phagocytosis. Are present in skin, mucus membranes, GI tract (process viral antigens onto their cell surface for presentation to T helper cells)

What are natural killer cells Ans - Recognize and kill cells expressing viral or tumor antigens

Activated natural killer cells release cytokines called _____ which causes lethal pores in target cells Ans - Perforins

Microbiology & Immunology Richard M. Hyde, 2012-12-06 The material in this text was compiled to serve as a study guide for a REVIEW of microbiology and immunology suitable for preparing for Step 1 of the United States Medical Licensing Examination USMLE I have assumed that you the reader have already had a full fledged course covering this discipline In depth presentation of material will not be found in this review You are urged to consult other study aids lecture notes textbooks etc for detailed explanations of material that you find troublesome In general the text of the book is on the left side of each page questions illustrations summary sentences or phrases and other study aids are on the right This format has the intent of getting you involved in the review process Use a highlighter put boxes around key statements answer the questions and fill in the blanks

as you work through the book Your reward will be proportional to your effort i.e. no pain no gain As the format is a work book you benefit most by active participation Write key words in the margins add to the Review State ments by writing out your own use whatever study skills you have found help you master an area The Present and Future of Immunology Education Andrea Bottaro, Deborah M. Brown, John Gregory Frelinger, 2022-01-24 The explosion of basic and applied immunology in the first decades of the 21st century has brought forth new opportunities and challenges for immunology education at all academic levels from professional to undergraduate medical graduate and post graduate instruction Moreover developing methods and techniques for educating general audiences on the importance and benefits of immunology will be critical for increasing public awareness and support One major immediate challenge consists in accommodating within the confines of traditional immunology curricula a body of knowledge that continues to grow exponentially in both size and complexity Furthermore the practical toolbox of immunological research has vastly expanded and even in the present environment of highly interdisciplinary and collaborative science future immunologists will likely need to be at least conversant in for instance computational structural and system biology nanotechnology and tissue engineering At the same time our perspective of the immune system has progressively developed from primarily a host defense mechanism to a fundamental homeostatic system with organism wide physiological and clinical significance and with potentially transformative biotechnological and therapeutic applications As a consequence in addition to stand alone courses immunology is increasingly integrated into other courses or distributed longitudinally throughout a multi year curriculum This necessitates interdisciplinary approaches to reach an expanding range of disciplines as diverse as neurobiology cancer biology oncology infectious diseases pharmacology orthopedics and bioengineering Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of one size fits all instruction and to tailor level and discipline appropriate content to different types of students using multiple teaching formats Finally like most other disciplines immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are digital natives comfortable with and expect on demand and multi modal learning diversified sources and active engagement Thankfully the dynamic and interactive behavior of immune system cells now visualized with striking immediacy by in vivo imaging has the ability to capture and hold the interest of even the most jaded learner The need for an increasingly immunology knowledgeable workforce not just academic and industry scientists but also clinical and research lab technicians biomedical engineers and physicians in a growing array of specialties will also expand job opportunities for immunologists as educators and for content creators dedicated to generating new didactic tools in this field Acknowledgement We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies IUIS
