Litan,2010-12-01 As recently as thirty years ago Americans lived in a financial world that today seems distant Investment and borrowing choices were meager virtually all transactions were conducted in cash or by check The financial services industry was heavily regulated as an outgrowth of the Depression while an elaborate safety net was constructed to prevent a repeat of that dismal episode in American history Today consumers and businesses have a dizzying array of choices about where to invest and borrow Plastic credit cards and electronic transfers increasingly are replacing cash and checks Much regulation has been dismantled although the industry remains fragmented by rules that continue to separate banks from other enterprises Meanwhile finance has gone global and increasingly high tech This book originally prepared as a report to Congress by the Treasury Department outlines a framework for setting policy toward the financial services industry in the coming decades The authors who worked closely with senior Treasury officials in developing their recommendations identify three core principles that lie at the heart of that framework an enhanced role for competition a shift in emphasis from preventing failures of financial institutions at all cost toward containing the damage of any failures that inevitably occur in a competitive market and a greater reliance on more targeted interventions to achieve policy goals rather than broad measures such as flat prohibitions on certain activities *New Work, Transformational and Virtual Leadership* Marc Helmold,2021-01-13 The increasing globalization the battle for talents and global trends are changing the work patterns in organisations around the globe Enterprises are working across country and cultural borders alongside complex supply and demand networks Global incidents such as the financial crisis in 2008 and the recent COVID 19 pandemic have forced global organizations to find innovative ways to continue to connect globally and maintain a competitive advantage Therefore innovative enterprises have established global and virtual organisations including members of the value chain on supply and demand side This book outlines these new work and leadership styles and agile organisations which are

necessary to work virtually and globally It provides case studies and experiences from different global organizations in different industries and sectors with a focus on value adding processes and services
