Cooke,2013-06-19 Leading up to the financial crisis of 2008 and onwards the shortcomings of traditional models of regional economic and environmental development had become increasingly evident Rooted in the idea that policy is an encumbrance to free markets the stress on supply side smoothing measures such as clusters and an over reliance on venture capital the inadequacy of existing orthodoxies has come to be replaced by the notion of Transversality This approach has three strong characteristics that differentiate it from its failing predecessor First as the name implies it seeks to finesse horizontal knowledge interactions as well as vertical ones thus building platforms of industrial interaction Secondly it is not a supply but a demand side model in which needs driven innovation rather than pure market competition prevails Finally it is ongoing through recessionary times being more robust than over specialised approaches to economic growth The intellectual origins of Transversality lie in an aspiration to promote eco innovation one of the key hopes of assisting Western regional and national economies to re balance and escape recession The policy models of key regional exponents of the concept are explored and their goals achievement is assessed An array of policy instruments and measures is presented for hands on policy implementation The book will be of vital interest to academics as teachers and researchers as well as policy advisers and public servants **Neuro** Nikolas Rose,Joelle M. Abi-Rached,2013-02-21 How the new brain sciences are transforming

our understanding of what it means to be human The brain sciences are influencing our understanding of human behavior as never before from neuropsychiatry and neuroeconomics to neurotheology and neuroaesthetics Many now believe that the brain is what makes us human and it seems that neuroscientists are poised to become the new experts in the management of human conduct Neuro describes the key developments theoretical technological economic and biopolitical that have enabled the neurosciences to gain such traction outside the laboratory It explores the ways neurobiological conceptions of personhood are influencing everything from child rearing to criminal justice and are transforming the ways we know ourselves as human beings In this emerging neuro ontology we are not determined by our neurobiology on the contrary it appears that we can and should seek to improve ourselves by understanding and acting on our brains Neuro examines the implications of this emerging trend weighing the promises against the perils and evaluating some widely held concerns about a neurobiological colonization of the social and human sciences Despite identifying many exaggerated claims and premature promises Neuro argues that the openness provided by the new styles of thought taking shape in neuroscience with its contemporary conceptions of the neuromolecular plastic and social brain could make possible a new and productive engagement between the social and brain sciences Copyright note Reproduction including downloading of Joan Miro works is prohibited by copyright laws and international conventions without the express written permission of Artists Rights Society

ARS New York The Human Genome Diversity Project Amade M'Charek, 2005-01-20 The Human Genome Diversity Project HGDP was launched in 1991 by a group of population geneticists whose aim was to map genetic diversity in hundreds of human populations by tracing the similarities and differences between them. It quickly became controversial and was accused of racism and bad science because of the special interest paid to sampling cell material from isolated and indigenous populations. The author spent a year carrying out participant observation in two of the laboratories involved and provides fascinating insights into daily routines and technologies used in those laboratories and also into issues of normativity, standardization and naturalisation. Drawing on debates and theoretical perspectives from across the social sciences, M'Charek explores the relationship between the tools used to produce knowledge and the knowledge thus produced in a way that illuminates the HGDP but also contributes to our broader understanding of the contemporary life sciences and their social implications.

Biology Education for Social and Sustainable Development Mijung Kim, C. H. Diong, 2012-10-20 In an era of globalization and urbanization, various social, economic and environmental challenges surround advances in modern biological sciences. Considering how biological knowledge and practice are intrinsically related to building a sustainable relationship between nature and human society, the roles of biology education need to be rethought to respond to issues and changes to life in this biocentury. This book is a compilation of selected papers from the Twenty Third Biennial Conference of the Asian Association for Biology Education 2010. The title *Biology Education for Social and Sustainable Development* demonstrates how rethinking and reconstruction of biology education in the Asia Pacific region are increasingly grounded in deep understandings of what counts as valuable local knowledge, practices, culture and ideologies for national and global issues and education for sustainable development. The 42 papers by eminent science educators from Australia, China, Philippines, Singapore, Taiwan and the U.S. represent a diversity of views, understandings and practices in biology education for sustainable development from school to university in diverse education systems and social/cultural settings in the Asia Pacific region and beyond. The book is an invaluable resource and essential reference for researchers and educators on Asian perspectives and practices on biology education for social and sustainable development.

Affective Capitalism Hangwoo Lee, 2023-12-26 Drawing on Tarde's and Deleuze's monadology this book investigates the affective turn of contemporary capitalism The concept of affect provides critical insight to overcome the limitations of social constructivism and cognitive capitalism Affective capitalism transforms the population's everyday bodily experiences into quantitative metrics that can be observed measured and processed on a non-conscious register turning them into individuals prepared to react and be affected by specific information at a given moment In an era where social wealth increasingly relies on the social factory algorithms and big data constitute the living labor beyond employment This book argues that affect also holds a potential for dismantling today's real subsumption of life by capital The network effect mostly actualized as a company's market capitalization is constantly traversed by the molecular becoming of affect leading to new assemblages such as free software movement decentralized platforms peer to peer networking blockchain and universal basic income
