Aviation and Its Management Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations education etc, one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety management systems and air traffic management. In particular, attention will be given to aspects such as analysis of air traffic in a domestic market, runway safety management systems, critical success factors for multiple MRO service providers, key pain points of the industry to be addressed to move into the future, new research on hub airports for international flights, new business models for airlines and runway safety management systems. This book is useful to aviation managers, educators, students and professionals interested in any of the above issues.

Aircraft Performance Mohammad H. Sadraey, 2023-07-14 Aircraft Performance: An Engineering Approach, Second Edition introduces flight performance analysis techniques of fixed wing air vehicles, particularly heavier than aircraft. It covers maximum speed, absolute ceiling, rate of climb, range, endurance, turn performance and takeoff run. Enabling the reader to analyze the performance and flight capabilities of an aircraft by utilizing only the aircraft weight data, geometry and engine characteristics, this book covers the flight performance analysis for both propeller driven and jet aircraft. The second edition features new content on vertical takeoff and landing, UAV launch, UAV recovery, use of rocket engine as the main engine, range for electric aircraft, electric engine endurance for electric aircraft, gliding flight, pull up and climb, turn. In addition, this book includes end of chapter problems, MATLAB code and examples and case studies to enhance and reinforce student understanding. This book is intended for senior undergraduate aerospace students taking courses in Aircraft Performance, Flight Dynamics and Flight Mechanics. Instructors will be able to utilize an updated Solutions Manual and Figure Slides for their course.

I Think and Write, Therefore You Are Confused Vahid Paez, 2021-08-02 The importance of good documentation can build a strong foundation for any thriving organization.
