 Hatzopoulos,2024-10-01 This book is addressed to students and professionals and it is aimed to cover as much as possible the
 broader region of topographic mapping as it has evolved into a modern field called geospatial information science and
 technology More emphasis is placed on using scientific methods and tools materialized in algorithms and software to produce
 practical results For this reason beyond the written material there are also many educational and professional software
 programs written by the first author to help comprehend the individual methodologies developed The Target of this book is to
 provide the people who work in fields of applications of topographic mapping environment geology geography cartography
 engineering geotechnical agriculture forestry geointelligence etc a source of knowledge for the broader region so that to
 help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to
 professionals and evaluating such contracting results It also aims to be a reference for theory and practice for professionals
 in Topographic Mapping This book applies a didactics method where with a relatively small effort someone can digest a large
 volume of simple or complicated knowledge material at a desirable scientific depth within a relatively short time interval The
 objective that educated people must be smarter than the machine and not treat the machine as a black box being button
 pushers has been achieved through the first author s experience in the USA and Greece with relative success by adopting
 this didactics technique There are 14 chapters including Reference systems and Projections Topographic instruments and
