The Architecture of Industry Mathew Aitchison, 2014 **Architectural Projects of Marco Frascari** Sam Ridgway, 2016-03-09 Marco Frascari believed that architects should design thoughtful buildings capable of inspiring their inhabitants to have pleasurable and happy lives A visionary Italian architect academic and theorist Frascari is best known for his extraordinary texts which explore the intellectual theoretical and practical substance of the architectural discipline As a student in Venice during the late 1960s Frascari was taught and mentored by Carlo Scarpa Later he moved to North America with his family where he became a fulltime academic Throughout his academic career he continued to work on numerous architectural projects including exhibitions competition entries and designs for approximately 35 buildings a small number of which were built As a means of re constructing the theatre of imaginative theory within which these buildings were created Sam Ridgway draws on a wide selection of Frascari s texts including his

richly poetic book *Monsters of Architecture* to explore the themes of representation demonstration and anthropomorphism Three of Frascari's delightful buildings are then brought to light and interpreted revealing a sophisticated and interwoven relationship between texts and buildings

In-Between: Architectural Drawing and Imaginative Knowledge in Islamic and Western Traditions Hooman Koliji, 2016-03-09 Contemporary technical architectural drawings in establishing a direct relationship between the drawing and its object tend to privilege the visible physical world at the expense of the invisible intangible ideas and concepts including that of the designer's imagination As a result drawing may become a utilitarian tool for documentation devoid of any meaningful value in terms of a kind of knowledge that could potentially link the visible and invisible This book argues that design drawings should be recognized as intermediaries mediating between the world of ideas and the world of things spanning the intangible and tangible The notion of the Imaginal as an intermediary between the invisible and visible is discussed showing how architectural drawings lend themselves to this notion by performing as creative agents contributing not only to the physical world but also penetrating the realm of concepts The book argues that this in-between quality to architectural drawing is essential and that it is critical to perceive drawings as subtle bodies that hold physical attributes for example form proportion color highly evocative yet with no matter Focusing on Islamic geometric architectural drawings both historical and contemporary it draws on key philosophical and conceptual notions of imagination from the Islamic tradition as these relate to the creative act In doing so this book not only makes important insights into the design process and act of architectural representation but more broadly it adds to debates on philosophies of the imagination linking both Western and Islamic traditions

The Material Imagination Matthew Mindrup, 2016-03-03 In recent years architectural discourse has witnessed a renewed interest in materiality under the guise of such familiar tropes as material honesty form finding or digital materiality Motivated in part by the development of new materials and an increasing integration of designers in fabricating architecture a proliferation of recent publications from both practice and academia explore the pragmatics of materiality and its role as a protagonist of architectural form Yet as the ethos of material pragmatism gains more popularity theorizations about the poetic imagination of architecture continue to recede Compared to an emphasis on the design of visual form in architectural practice the material imagination is employed when the architect thinks matter dreams in it lives in it or in other words materializes the imaginary As an alternative to a formal approach in architectural design this book challenges readers to rethink the reverie of materials in architecture through an examination of historical precedent architectural practice literary sources philosophical analyses and everyday experience Focusing on matter as the premise of an architect's imagination each chapter identifies and graphically illustrates how material imagination defines the conceptual premises for making architecture

Architecture and Empire in Jamaica Louis P. Nelson, 2016-01-01 Through Creole houses and merchant stores to sugar fields and boiling houses Jamaica played a leading role in the formation of both the early modern Atlantic world and the British Empire Architecture and

Empire in Jamaica offers the first scholarly analysis of Jamaican architecture in the long 18th century spanning roughly from the Port Royal earthquake of 1692 to Emancipation in 1838 In this richly illustrated study which includes hundreds of the author s own photographs and drawings Louis P Nelson examines surviving buildings and archival records to write a social history of architecture Nelson begins with an overview of the architecture of the West African slave trade then moves to chapters framed around types of buildings and landscapes including the Jamaican plantation landscape and fortified houses to the architecture of free blacks He concludes with a consideration of Jamaican architecture in Britain By connecting the architecture of the Caribbean first to West Africa and then to Britain Nelson traces the flow of capital and makes explicit the material economic and political networks around the Atlantic

The Recovery of Natural Environments in Architecture

C. Alan Short, 2017-01-20 The Recovery of Natural Environments in Architecture challenges the modern practice of sealing up and mechanically cooling public scaled buildings in whichever climate and environment they are located This book unravels the extremely complex history of understanding and perception of air bad air miasmas airborne pathogens beneficial thermal conditions ideal climates and climate determinism It uncovers inventive and entirely viable attempts to design large buildings hospitals theatres and academic buildings through the 19th and early 20th centuries which use the configuration of the building itself and a shrewd understanding of the natural physics of airflow and fluid dynamics to make good comfortable interior spaces In exhuming these ideas and reinforcing them with contemporary scientific insight the book proposes a recovery of the lost art and science of making naturally conditioned buildings

Construction Research at

NIOSH Institute of Medicine, National Research Council, Division on Engineering and Physical Sciences, Board on Infrastructure and the Constructed Environment, Committee to Review the NIOSH Construction Research

Program, 2009-04-12 The National Institute for Occupational Safety and Health NIOSH conducts construction relevant research activities From 1996 through 2005 the program focused on four research goals reducing traumatic injuries and fatalities reducing exposure to health hazards reducing major risks associated with musculoskeletal disorders increasing the understanding of construction industry attributes and factors for improving health and safety outcomes In this book the National Research Council evaluates the relevance and impact of the NIOSH Construction Research Program in terms of its research priorities and its connection to improvements in the protection of workers in the workplace It also assesses the program s identification and targeting of new research areas to identify emerging research issues and to provide advice on ways that the program might be strengthened The book finds that the efforts of the Construction Research Program have made meaningful contributions to improving construction worker safety and health and provides overreaching and specific recommendations for continuing progress While NIOSH cannot set and enforce research based standards on its own the program can be expected to help reduce construction workplace fatalities injuries and illnesses through its research its research dissemination and transfer into practice

The City Crown by Bruno Taut Matthew Mindrup, Ulrike

Altenmüller-Lewis,2016-03-09 This book is the first English translation of the German architect Bruno Taut's early twentieth century anthology *Die Stadtkrone* *The City Crown*. Written under the influence of World War I, Taut developed *The City Crown* to promote a utopian urban concept where people would live in a garden city of apolitical socialism and peaceful collaboration around a single purpose free crystalline structure. Taut's proposal sought to advance the garden city idea of Ebenezer Howard and rural aesthetic of Camillo Sitte's urban planning schemes by merging them with his own city crown concept. The book also contains contributions by the Expressionist poet Paul Scheerbarth, the writer and politician Erich Baron, and the architectural critic Adolf Behne. Although the original German text was republished in 2002, only the title essay of *The City Crown* has previously been translated into English. This English translation of Taut's full anthology, complete with all illustrations and supplementary texts, fills a significant gap in the literature on early modern architecture in Germany and the history of urban design. It includes a translator's preface, introduction, and afterword to accompany the original composition of essays, poems, designs, and images. These original texts are accompanied by illustrations of Taut's own designs for a utopian garden city of 300,000 inhabitants and over 40 additional historic and contemporary examples. The new preface to *The City Crown* explains the premise for the English translation of Taut's anthology, its organization, and the approaches taken by the translators to maintain the four different voices included in the original work. Matthew Mindrup's introduction critically examines the professional and intellectual developments leading up to and supporting Bruno Taut's proposal to advance the English garden city concept with a centralized communal structure of glass. *The City Crown*. Through the careful examination of original Candide. Journal for Architectural Knowledge, Axel Sowa, Nicholas Boyarsky, Lard Buurman, Davide Deriu, Ela Kacel, 2021-02-25.

Die zwölfte Ausgabe von *Candide* widmet sich dem Thema Visual Urbanism. Ein vollkommen neues Forschungsfeld. Fotograf:innen und Wissenschaftler:innen experimentierten mit anthropologischen, kulturwissenschaftlichen, soziologischen und geografischen Methoden für eine Reflexion über die meist unkritische Nutzung von Bildern des öffentlichen Raums. *Candide* 12 sucht Möglichkeiten, diese Ergebnisse in Architektur und Stadtplanung zu integrieren. Dabei beantworten Autor:innen dringende Fragen wie nach der Nutzbarmachung fotografischer Bilder für die Architektur und vice versa.

Industries of Architecture, Katie Lloyd Thomas, Tilo Amhoff, Nick Beech, 2015-11-06. At a time when the technologies and techniques of producing the built environment are undergoing significant change, this book makes central architecture's relationship to industry. Contributors turn to historical and theoretical questions as well as to key contemporary developments, taking a humanities approach to the Industries of Architecture that will be of interest to practitioners and industry professionals as much as to academic researchers, teachers, and students. How has modern architecture responded to mass production? How do we understand the necessarily social nature of production in the architectural office and on the building site? And how is architecture entwined within wider fields of production and reproduction, finance, capital, the spaces of regulation, and management techniques? What are the particular effects of techniques and technologies, and above all their

inter relations on those who labour in architecture the buildings they produce and the discursive frameworks we mobilise to understand them

Eco-Homes Doctor Jenny Pickerill,2016-01-15 It is widely understood that good affordable eco housing needs to be at the heart of any attempt to mitigate or adapt to climate change This is the first book to comprehensively explore eco housing from a geographical social and political perspective It starts from the premise that we already know how to build good eco houses and we already have the technology to retrofit existing housing Despite this relatively few eco houses are being built Featuring over thirty case studies of eco housing in Britain Spain Thailand Argentina and the United States *Eco Homes* examines the ways in which radical changes to our houses such as making them more temporary using natural materials or relying on manual heating and ventilation systems require changes in how we live As such it argues it is not lack of technology or political will that is holding us back from responding to climate change but deep rooted cultural and social understandings of our way of life and what we expect our houses to do for us

Victorian Perceptions of

Renaissance Architecture Dr Katherine Wheeler,2014-05-28 In the mid 1880s an influential British architectural journal published an article characterizing Renaissance architecture as a corruption of classical architecture By the turn of the century however the same journal praised the Renaissance architect Filippo Brunelleschi as the Christopher Columbus of modern architecture Relevant for architectural historians literary scholars and those in Victorian studies this book examines the conflicting late nineteenth century characterizations of Renaissance architecture and reassesses them within the formation of a modern British architectural profession
