insight for better trading decisions *The Art of Servant Leadership II* Art Barter, 2018-02-02 Not many industry revolutions begin with a typical married couple who risk everything to do something they've never done before. But that is exactly what Art and Lori Barter did in 2004 when they purchased Datron World Communications. The husband and wife knew everything about the power of strong values and the lack of values in modern corporations but nothing about running a large scale business that was at the time losing money. It was a test of faith and perseverance unlike any other. Everything from financial security to spiritual fulfillment was on the line. *The Art of Servant Leadership II* instructs modern business leaders on how to transform their businesses to servant led organizations that prioritize integrity over profitability and never ending quests to accumulate power. By integrating the servant led paradigm into their inner lives and professional thinking today's leaders can revolutionize heartless corporate strategies that reward the few at the expense of the many. Today Datron World Communications is a multimillion dollar multicultural international company with customers in more than eighty countries. That success is the result of the lessons taught in *The Art of Servant Leadership II* and proof that serving others with compassion and humility brings unprecedented rewards.

Indoor Scene Recognition by 3-D Object Search Pascal Meißner, 2019-10-11 This book focuses on enabling mobile robots to recognize scenes in indoor environments in order to allow them to determine which actions are appropriate at which points in time. In concrete terms future robots will have to solve the classification problem represented by scene recognition sufficiently well for them to act independently in human centered environments. To achieve accurate yet versatile indoor scene recognition the book presents a hierarchical data structure for scenes the Implicit Shape Model trees. Further it also provides training and recognition algorithms for these trees. In general entire indoor scenes cannot be perceived from a single point of view. To address this problem the authors introduce Active Scene Recognition ASR a concept that embeds canonical scene recognition in a decision making system that selects camera views for a mobile robot to drive to so that it can find objects not yet localized. The authors formalize the automatic selection of camera views as a Next Best View NBV problem to which they contribute an algorithmic solution which focuses on realistic problem modeling while maintaining its computational efficiency. Lastly the book introduces a method for predicting the poses of objects to be searched establishing the otherwise missing link between scene recognition and NBV estimation.
