7. anaphase II

8. metaphase I

9. metaphase II

10. Using the pictures & phases above, describe what is happening in each phase:

- Interphase: G1 – cell grows; S-DNA is duplicated; G2 – cells grows & makes sure all the organelles are duplicated.
- Prophase I: nuclear membrane breaks down; nucleolus disappears; centrioles begin to migrate to opposite sides of the cell; spindle fibers begin to form; homologous chromosomes form; crossing over occurs
- Metaphase I: homologous chromosomes are lined up down the middle of the cell
- Anaphase I: homologous chromosomes are pulled apart & sister chromatids are pulled to opposite sides of the cell, cell has gone from diploid to haploid
- Telophase I: nuclear membrane reforms, nucleolus reappears; spindle fibers disappear; cell divides in 2
- Prophase II: nuclear membrane breaks down; nucleolus disappears; centrioles begin to migrate to opposite sides of both cells; spindle fibers begin to form; sister chromatids form
- Metaphase II: sister chromatids are lined up down the middle of both cells.
- Anaphase II: sister chromatids are pulled apart & chromosomes are pulled to opposite sides of both cells
- Telophase II: nuclear membrane reforms in the 4 cells, nucleolus reappears; spindle fibers disappear; cell divides into 4 genetically different cells

more satisfaction in learning The International Baccalaureate Biology Exam Vocabulary Workbook is different from traditional review books because it focuses on the exam's Insider's Language. It is an outstanding supplement to a traditional review program. It helps your preparation for the exam become easier and more efficient. The strategies, puzzles, and questions give you enough exposure to the Insider's Language to use it with confidence and make it part of your long-term memory. The International Baccalaureate Biology Exam Vocabulary Workbook is an awesome tool to use before a course of study as it will help you develop a strong working Insider's Language before you even begin your review. Learn the Secret to Success After nearly 20 years of teaching, Lewis Morris discovered a startling fact: Most students didn't struggle with the subject; they struggled with the language. It was never about brains or ability. His students simply didn't have the knowledge of the specific language needed to succeed. Through experimentation and research, he discovered that for any subject, there was a list of essential words that, when mastered, unlocked a student's ability to progress in the subject. Lewis called this set of vocabulary the Insider's Words. When he applied these Insider's Words, the results were incredible. His students began to learn with ease. He was on his way to developing the landmark series of workbooks and applications to teach this Insider's Language to students around the world.

Modules McDougal Littell Incorporated, 2005 *Frank Schaffer's Biology for Everyday* David Thurlo, 2000. Students learn about important subjects by relating them to events and things that occur in their everyday lives. A wealth of interesting activities provide a detailed look into each subject. Easy-to-use activities can be completed individually at school or at home, though a few hands-on experiments require group work and data sharing. A great supplement to any existing curriculum. Explores biology topics such as the characteristics of living things, the chemistry of biology, ecology, and environment, animals, diseases, and microbes.

Application of Visual Data in K-16 Science Classrooms Kevin D. Finson, Jon Pedersen, 2015-03-01. This book examines visual data use with students PK-16 as well as in pre-service and in-service science teacher preparation. Each chapter includes discussion about the current state of the art with respect to science classroom application and utilization of the particular visual data targeted by the author's discussion and explanation about the targeted visual data as applied by the author in his/her classroom, use of visual data as a diagnostic tool, its use as an assessment tool, and discussion of implications for science teaching and/or science teacher preparation. Although the body of research and practice in this field is growing, there remains a gap in the literature about clearly explicating the use of visual data in the science classroom. A growing body of literature discusses what visual data are, although this topic is still viewed as being at the beginning of its development in educators' thinking, and there are some scattered examples of studies exploring the use of visual data in science classrooms, although those studies have not necessarily clearly identified their foci as visual data per se. As interest and attention has become more focused on visual data, a logical progression of questioning has been how visual data are actually applied in the science classroom, whether it be early elementary, college, or somewhere in between. Visual data applications of interest to the science education community include how it is identified

how it can be used with students and how students can generate it themselves how it can be employed as a diagnostic tool in concept development and how it can be utilized as an assessment tool This book explores that as well as a variety of pragmatic ways to help science educators more effectively utilize visual data and representations in their instruction
