search engines make it possible to locate a sufficiently large number of relevant documents. However, while conducting such research, we encountered the following challenges: the data are somewhat fragmented and their systematization and structuring are required; search results do not always meet search queries. For instance, data that were relevant to the topic were found, but they did not match the query as accumulated data grow, the search time for new information extends, the choice of search engine and location in different countries affects search results, the data are not indexed in search engines, although the correct keywords and website were requested, the information disappears due to website updates, and the found data require additional processing. For example, many presentations show changes in the shape of the discharge curves depending on the discharge current strength. In addition, however, Ragone plots are necessary for a correct comparison, and therefore the mathematical processing of presented results is required. Thus, this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications.

Subject Guide to Books in Print, 1997 **The World Scientific Handbook Of Energy** Gerard M. Crawley, 2013-01-28

Competition for energy resources worldwide will almost certainly increase because of population growth and economic expansion, especially in countries such as China and India with large populations. In addition, environmental concerns with the use of certain energy sources add a complicating factor to decisions about energy use. Therefore, there is likely to be an increased commitment around the world to invest in energy systems. The World Scientific Handbook of Energy provides comprehensive, reliable, and timely sets of data on energy resources and uses it to gather in one publication a concise description of the current state of the art for a wide variety of energy resources, including data on resource availability worldwide and at different cost levels. The end use of energy in transportation, residential, and industrial areas is outlined, and energy storage, conservation, and the impact on the environment are included. Experts and key personnel straddling academia and related agencies and industries provide critical data for further exploration and research. Experts in these various areas who provide relevant data for further exploration and research include: former Head of the Nuclear Reactors Directorate of the CEA, Director of the Potential Gas Agency who leads a team of 100 geologists, geophysicists, and petroleum engineers; former CEO of an Icelandic engineering company that specializes in the design, construction, and operation of Kalina binary power plants for geothermal, biomass, and industrial waste heat recovery applications; Chairman of the Scottish Hydrogen and Fuel Cells Association; former Director of the Geo Heat Center at the Oregon Institute of Technology who received the Patricius Medal from the German Geothermal Association for his pioneer work in the direct use of geothermal energy; Division Director of NETL's Strategic Center for Coal who provides expert guidance and consultation to major DOE-funded clean coal technology and carbon sequestration demonstration projects; an internationally recognized expert in the physics and technology of Inertial Confinement Fusion (ICF); former Senior Scientist and Director of the Center for Distributed Generation and Thermal Distribution with Washington

State University who was responsible for state policy technical assistance to resource developers and investigations related to geothermal energy development a main author on the 2005 Billion Ton Report and 2011 Billion Ton Update and many more extremely well published and well known individuals straddling academia and related agencies and industries
