Machine Learning Tom M. Mitchell, Jaime G. Carbonell, Ryszard S. Michalski, 2012-12-06 One of the currently most active research areas within Artificial Intelligence is the field of Machine Learning which involves the study and development of computational models of learning processes A major goal of research in this field is to build computers capable of improving their performance with practice and of acquiring knowledge on their own The intent of this book is to provide a snapshot of this field through a broad representative set of easily assimilated short papers As such this book is intended to complement

the two volumes of Machine Learning An Artificial Intelligence Approach Morgan Kaufman Publishers which provide a smaller number of in depth research papers Each of the 77 papers in the present book summarizes a current research effort and provides references to longer expositions appearing elsewhere These papers cover a broad range of topics including research on analogy conceptual clustering explanation based generalization incremental learning inductive inference learning apprentice systems machine discovery theoretical models of learning and applications of machine learning methods A subject index IS provided to assist in locating research related to specific topics The majority of these papers were collected from the participants at the Third International Machine Learning Workshop held June 24 26 1985 at Skytop Lodge Skytop Pennsylvania While the list of research projects covered is not exhaustive we believe that it provides a representative sampling of the best ongoing work in the field and a unique perspective on where the field is and where it is headed

Exploding Technology, Responsible Growth IEEE Computer Society, 1979 **High-level Petri Nets** Kurt Jensen, Grzegorz Rozenberg, 2012-12-06 High level Petri nets are now widely used in both theoretical analysis and practical modelling of concurrent systems The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low level Petri nets while on the other hand they still offer a wide range of analysis methods and tools The step from low level nets to high level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept In low level nets there is only one kind of token and this means that the state of a place is described by an integer and in many cases even by a boolean value In high level nets each token can carry complex information which e g may describe the entire state

of a process or a data base Today most practical applications of Petri nets use one of the different kinds of high level nets A considerable body of knowledge exists about high level Petri nets this includes theoretical foundations analysis methods and many applications Unfortunately the papers on high level Petri nets have been scattered throughout various journals and collections As a result much of this knowledge is not readily available to people who may be interested in using high level nets
