Growing Vegetables West of the Cascades, 6th Edition Steve Solomon, 2009-06-01 This is the updated 6th edition of Growing Vegetables West of the Cascades which has evolved from a self-published pamphlet to the master guide to organic vegetable gardening over the past 28 years. Steve Solomon, who was a founder of the Territorial Seed Company, was one of the early proponents of organic gardening and the first to codify and refine the best practices of small plot vegetable gardening in the Pacific Northwest. The approaches to understanding and preparing soils, composting, chemical-free fertilizers, efficient uses of water and garden planning are universal to any climate or region. Solomon gets specific in his extensive advice on growing specific crops in the gentle maritime Northwest climate. This update includes his latest findings on seed sources, refinements in growing and cultivation techniques and other organic gardening best practices. Growing Vegetables West of the Cascades lays out the principles but the author advocates that readers think for themselves and grow their gardens as they see fit.

Origin of Species 6th Edition On the Tendency of Species to Form Varieties The Original Scientific Text leading to On the Origin of Species is formatted for your eReader with a functional and detailed table of contents This work of scientific literature is considered to be the foundation of evolutionary biology Its full title was On the Origin of Species by Means of Natural Selection or the Preservation of Favoured Races in the Struggle for Life For the sixth edition of 1872 the title was changed to The Origin of Species Darwin s book introduced the scientific theory that populations evolve over the course of generations through a process of natural selection It presented a body of evidence that the diversity of life arose by common descent through a branching pattern of evolution Darwin included evidence that he had gathered on the Beagle expedition in the 1830s and his subsequent findings from research correspondence and experimentation Various evolutionary ideas had already been proposed to explain new findings in biology There was growing support for such ideas among dissident anatomists and the general public but during the first half of the 19th century the English scientific establishment was closely tied to the Church of England while science was part of natural theology Ideas about the transmutation of species were controversial as they conflicted with the beliefs that species were unchanging parts of a designed hierarchy and that humans were unique unrelated to other animals The political and theological implications were intensely debated but transmutation was not accepted by the scientific mainstream The book was written for non specialist readers and attracted widespread interest upon its publication As Darwin was an eminent scientist his findings were taken seriously and the evidence he presented generated scientific philosophical and religious discussion The debate over the book contributed to the campaign by T H Huxley and his fellow members of the X Club to secularise science by promoting scientific naturalism Within two decades there was widespread scientific agreement that evolution with a branching pattern of common descent had occurred but scientists were slow to give natural selection the significance that Darwin thought appropriate During the eclipse of Darwinism from the 1880s to the 1930s various other mechanisms of evolution were given more credit With the development of the modern evolutionary synthesis in the 1930s and 1940s Darwin s concept of evolutionary adaptation through natural selection became central to modern evolutionary theory now the unifying concept of the life sciences
