

Volcanoes and Other Igneous Activity

ENR 200 - Chapter 10a

Volcanoes

- Some volcanoes erupt violently (Mt. St. Helens) while others erupt gently (Hawaii)
- The violence of an eruption is due to the viscosity of the magma, which depends upon:
 - Magma's composition
 - Magma's temperature
 - Amount of dissolved gases
- The more viscous the magma, the more violent the eruption

Composition

- Most of the magma that will have varying amounts of silica content (basalt has low amount, granite has high)
- A magma's viscosity is directly related to its silica content (high viscosity, the high amount of silica)

Temperature

- The hotter the magma, the more violent it will be
- Magma can produce dyke vents, hot gas vents (the hotter the dyke, the hotter it is)

Dissolved Gases

- Magma has the potential composition to be magmatic
- Most of the dissolved gas is water vapor
- Highly viscous magma trap gases until they reach an eruption

What is extruded during volcanic eruptions?

- Lava flows
- Gases
- Pyroclastic materials

Volcano and Geothermal Tourism Patricia Erfurt-Cooper, Malcolm Cooper, 2010 There are over 1300 active volcanoes worldwide and many more dormant or extinct Some are developed as tourist destinations others are not but have great potential Mount Fuji in Japan attracts over 100 million visitors per year and has immense cultural and spiritual significance while a number of volcanic areas in national parks for example Teide in Spain Yellowstone in the US Vesuvius in Italy and Tongariro in New Zealand attract between one to four million tourists each year

In the last decade the designation of nearly 50 geoparks around the world has highlighted their potential for tourism development This book provides the first global review and assessment of the sustainable use of active and dormant volcanic and geothermal environments for geotourism The volcano based tourism sector is further augmented through a closely linked range of geothermal resources and attractions such as geysers and hot springs which are discussed in detail throughout individual chapters covering all key volcanic and geothermal regions around the world It is shown that volcano and geothermal tourism is a subsection of nature based geotourism and incorporates a variety of other tourism categories such as adventure tourism extreme tourism ecotourism green tourism educational tourism and hot spring tourism This comprehensive book covers the most important issues of this growing tourism sector whilst incorporating relevant global research making it an essential resource for all in the field Includes colour plates
