a fascinating review of the many iterations this subject has received as reflected in the several different sets of guidelines for infant feeding by HIV infected mothers issued by the World Health Organization and a debate by leading scientists on whether HIV infected mothers should breastfeed their infants in resource limited and in resource rich settings A comprehensive overview of the current state of implementing the new evidence for prevention of breastfeeding transmission of HIV all over the world is also presented Essential reading for the many disciplines of scientists and clinicians working on HIV AIDS and other retroviruses pediatricians obstetricians gynecologists as well as all health care professionals interested in expanding their understanding on the subject

The Role of Physical and Biological Gut Barriers in Modulating Crosstalk between the Microbiota and the Immune System Marika Falcone, Federica Facciotti, Julien Diana, 2024-07-29 The intestine has several means for maintaining immune homeostasis and for avoiding inflammation despite massive antigenic stimulation by food components and by commensal bacteria residing in the gut mucosa These mechanisms include physical and biological barriers such as i the intestinal epithelial barrier IEB ii the gut vascular barrier GVB and iii the mucus layer In particular the mucus layer does not simply act as a diffusion barrier but has important dynamic functions that regulate the type of commensal bacteria residing in the inner mucus layer enabling the passage of food and bacterial products into the gut tissue and systemic circulation Importantly the mucosal layer also has key immune regulatory functions A healthy mucus structure is fundamental for promoting the presence of beneficial commensal bacteria such as the short chain fatty acids SCFA producing bacteria which are known to promote immune tolerance Moreover the mucus layer contains anti microbial peptides AMPs and mucins that have key immune modulatory functions The integrated response of these combined defense systems is fundamental for containing microbes and their products within the intestine for avoiding their systemic spread and for suppressing their capacity to activate systemic immune and autoimmune responses
