 Theodore H. Fleming, Liliana M. Dávalos, Marco A.R. Mello, 2020-10-16 With more than two hundred species distributed from
 California through Texas and across most of mainland Mexico Central and South America and islands in the Caribbean Sea
 the Phyllostomidae bat family American leaf nosed bats is one of the world s most diverse mammalian families From an
 insectivorous ancestor species living today over about 30 million years have evolved a hyper diverse range of diets from
 blood or small vertebrates to consuming nectar pollen and fruit Phyllostomid plant visiting species are responsible for
 pollinating more than five hundred species of neotropical shrubs trees vines and epiphytes many of which are economically
 and ecologically important and they also disperse the seeds of at least another five hundred plant species Fruit eating and
 seed dispersing members of this family thus play a crucial role in the regeneration of neotropical forests and the fruit eaters
 are among the most abundant mammals in these habitats Coauthored by leading experts in the field and synthesizing the
 latest advances in molecular biology and ecological methods *Phyllostomid Bats* is the first overview in more than forty years
 of the evolution of the many morphological behavioral physiological and ecological adaptations in this family Featuring
 abundant illustrations as well as details on the current conservation status of phyllostomid species it is both a comprehensive
 reference for these ecologically vital creatures and a fascinating exploration of the evolutionary process of adaptive radiation
